A donation platform website to help streaming creators and their audiences make supporting their favorite creators easier, a B2B project with GoPay.

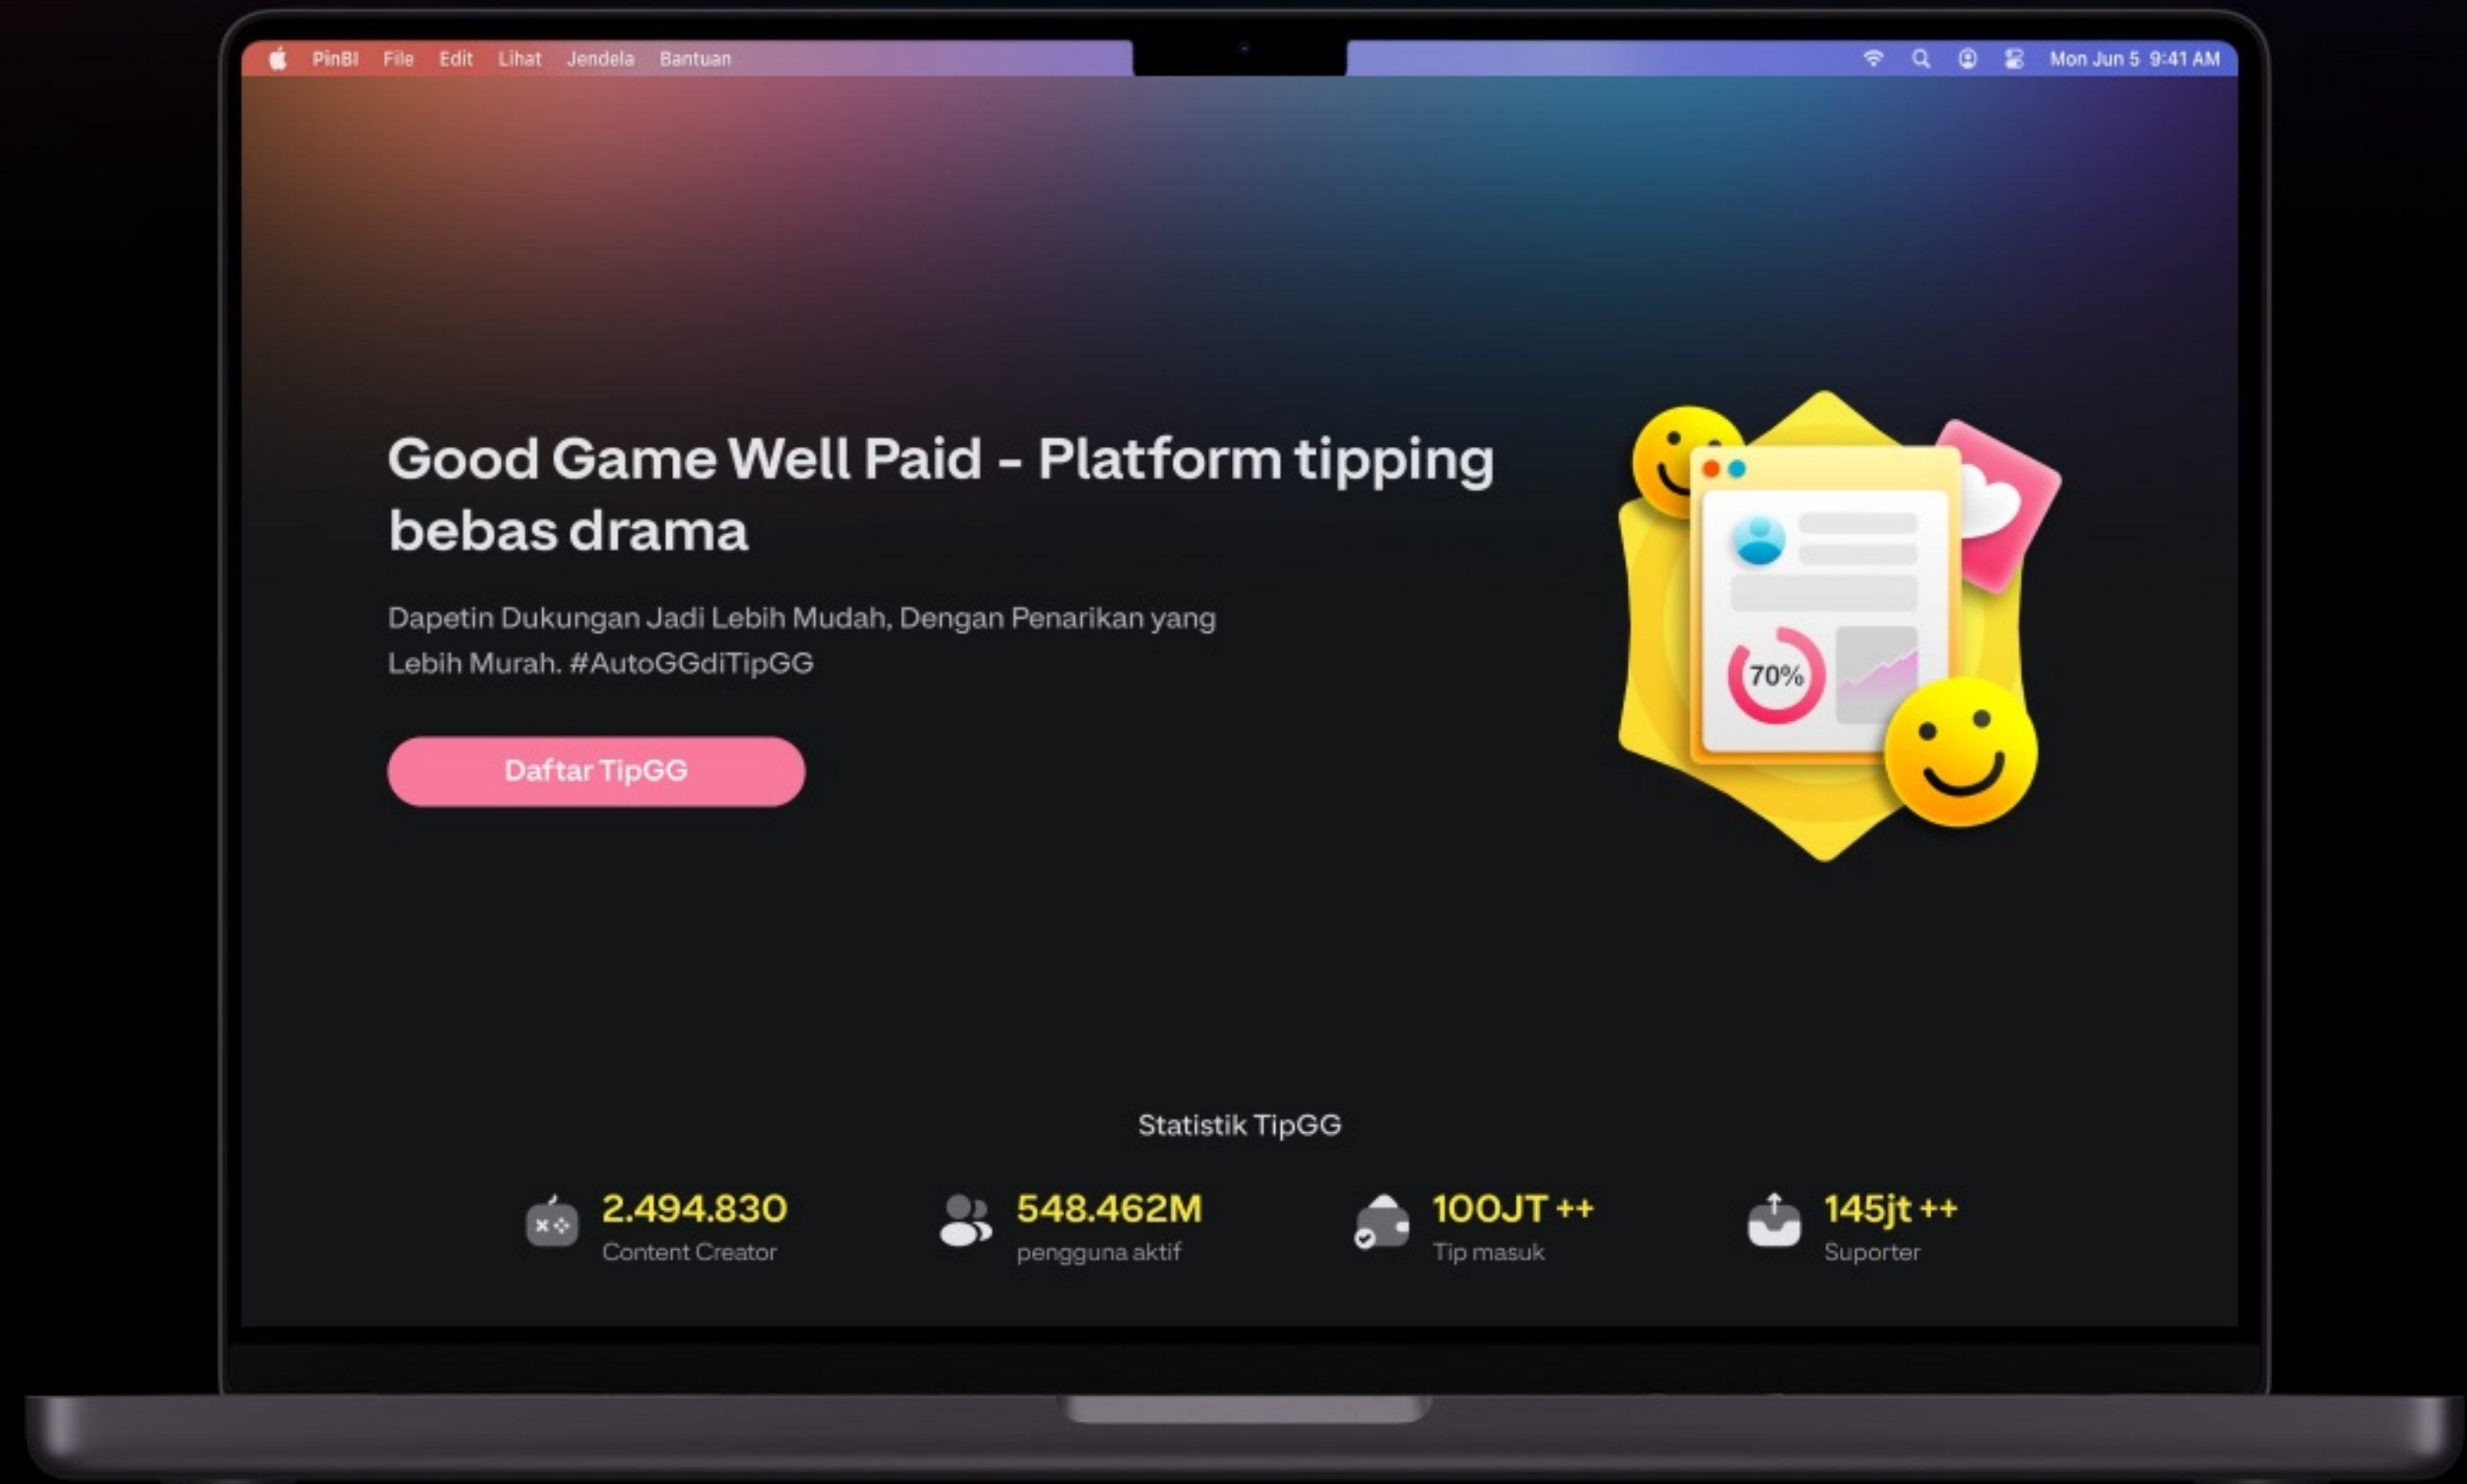

Link Website

<https://tipgg.co>

Project Duration

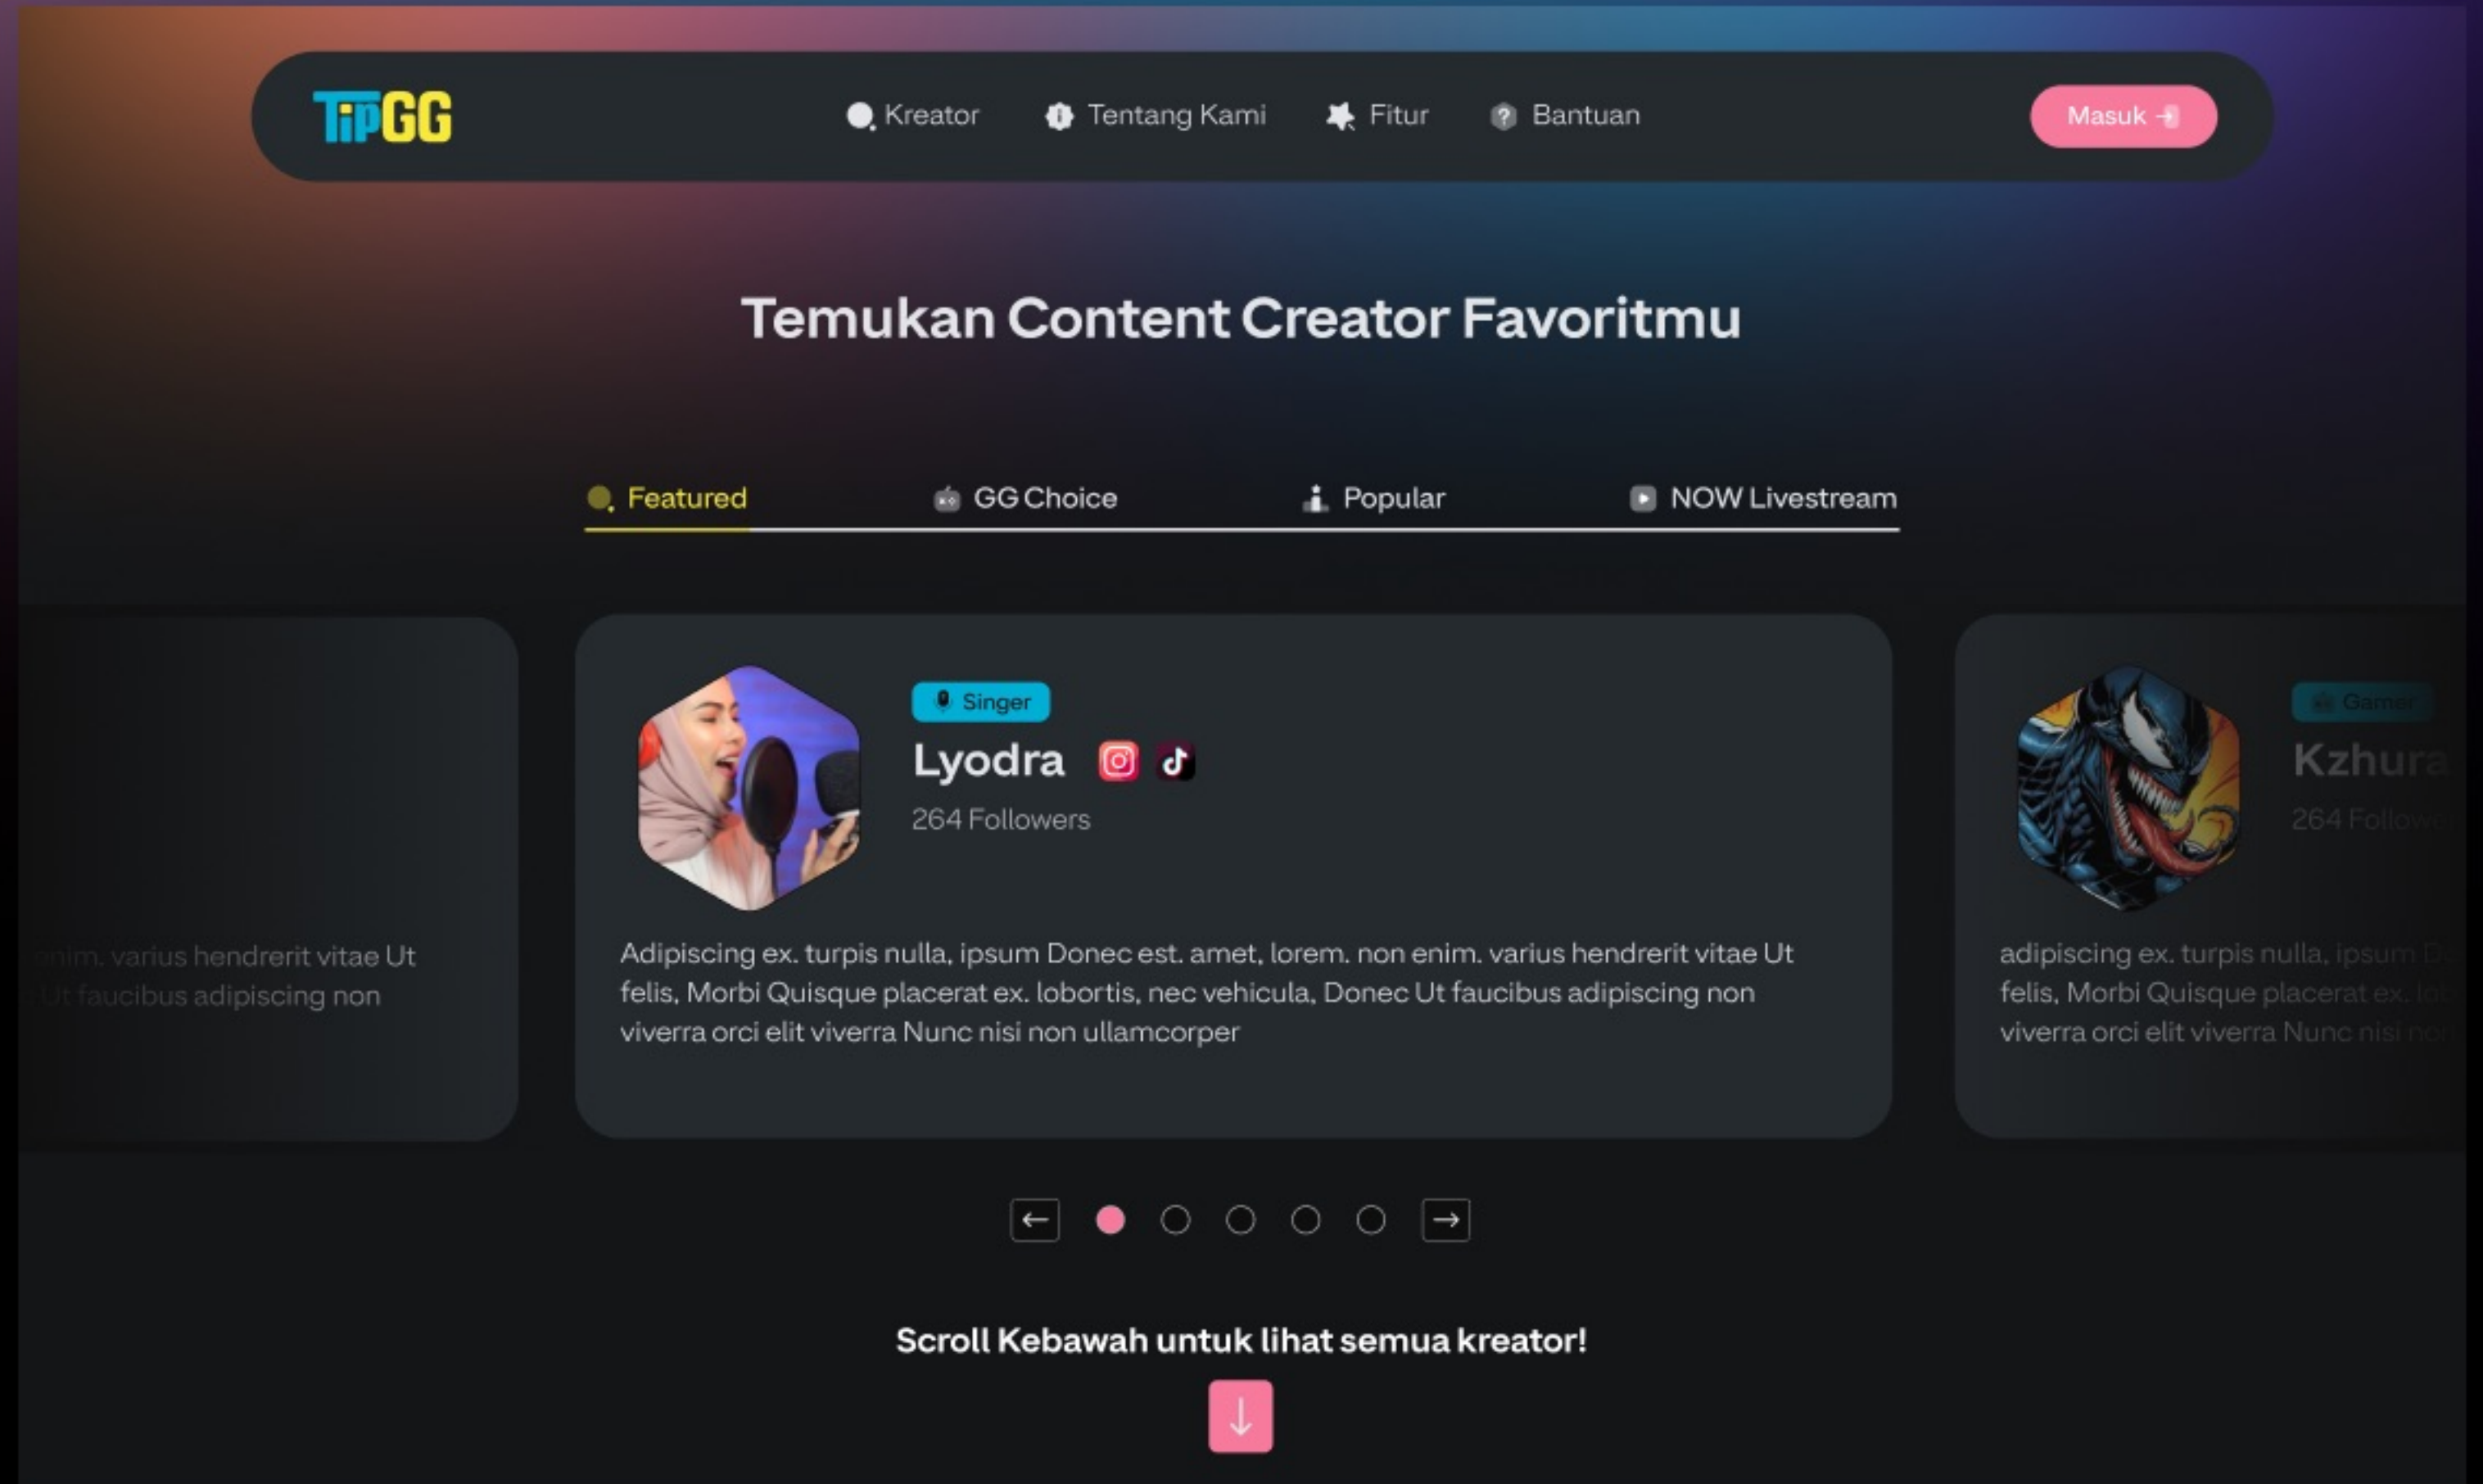

Mei - Juli 2025

Tools

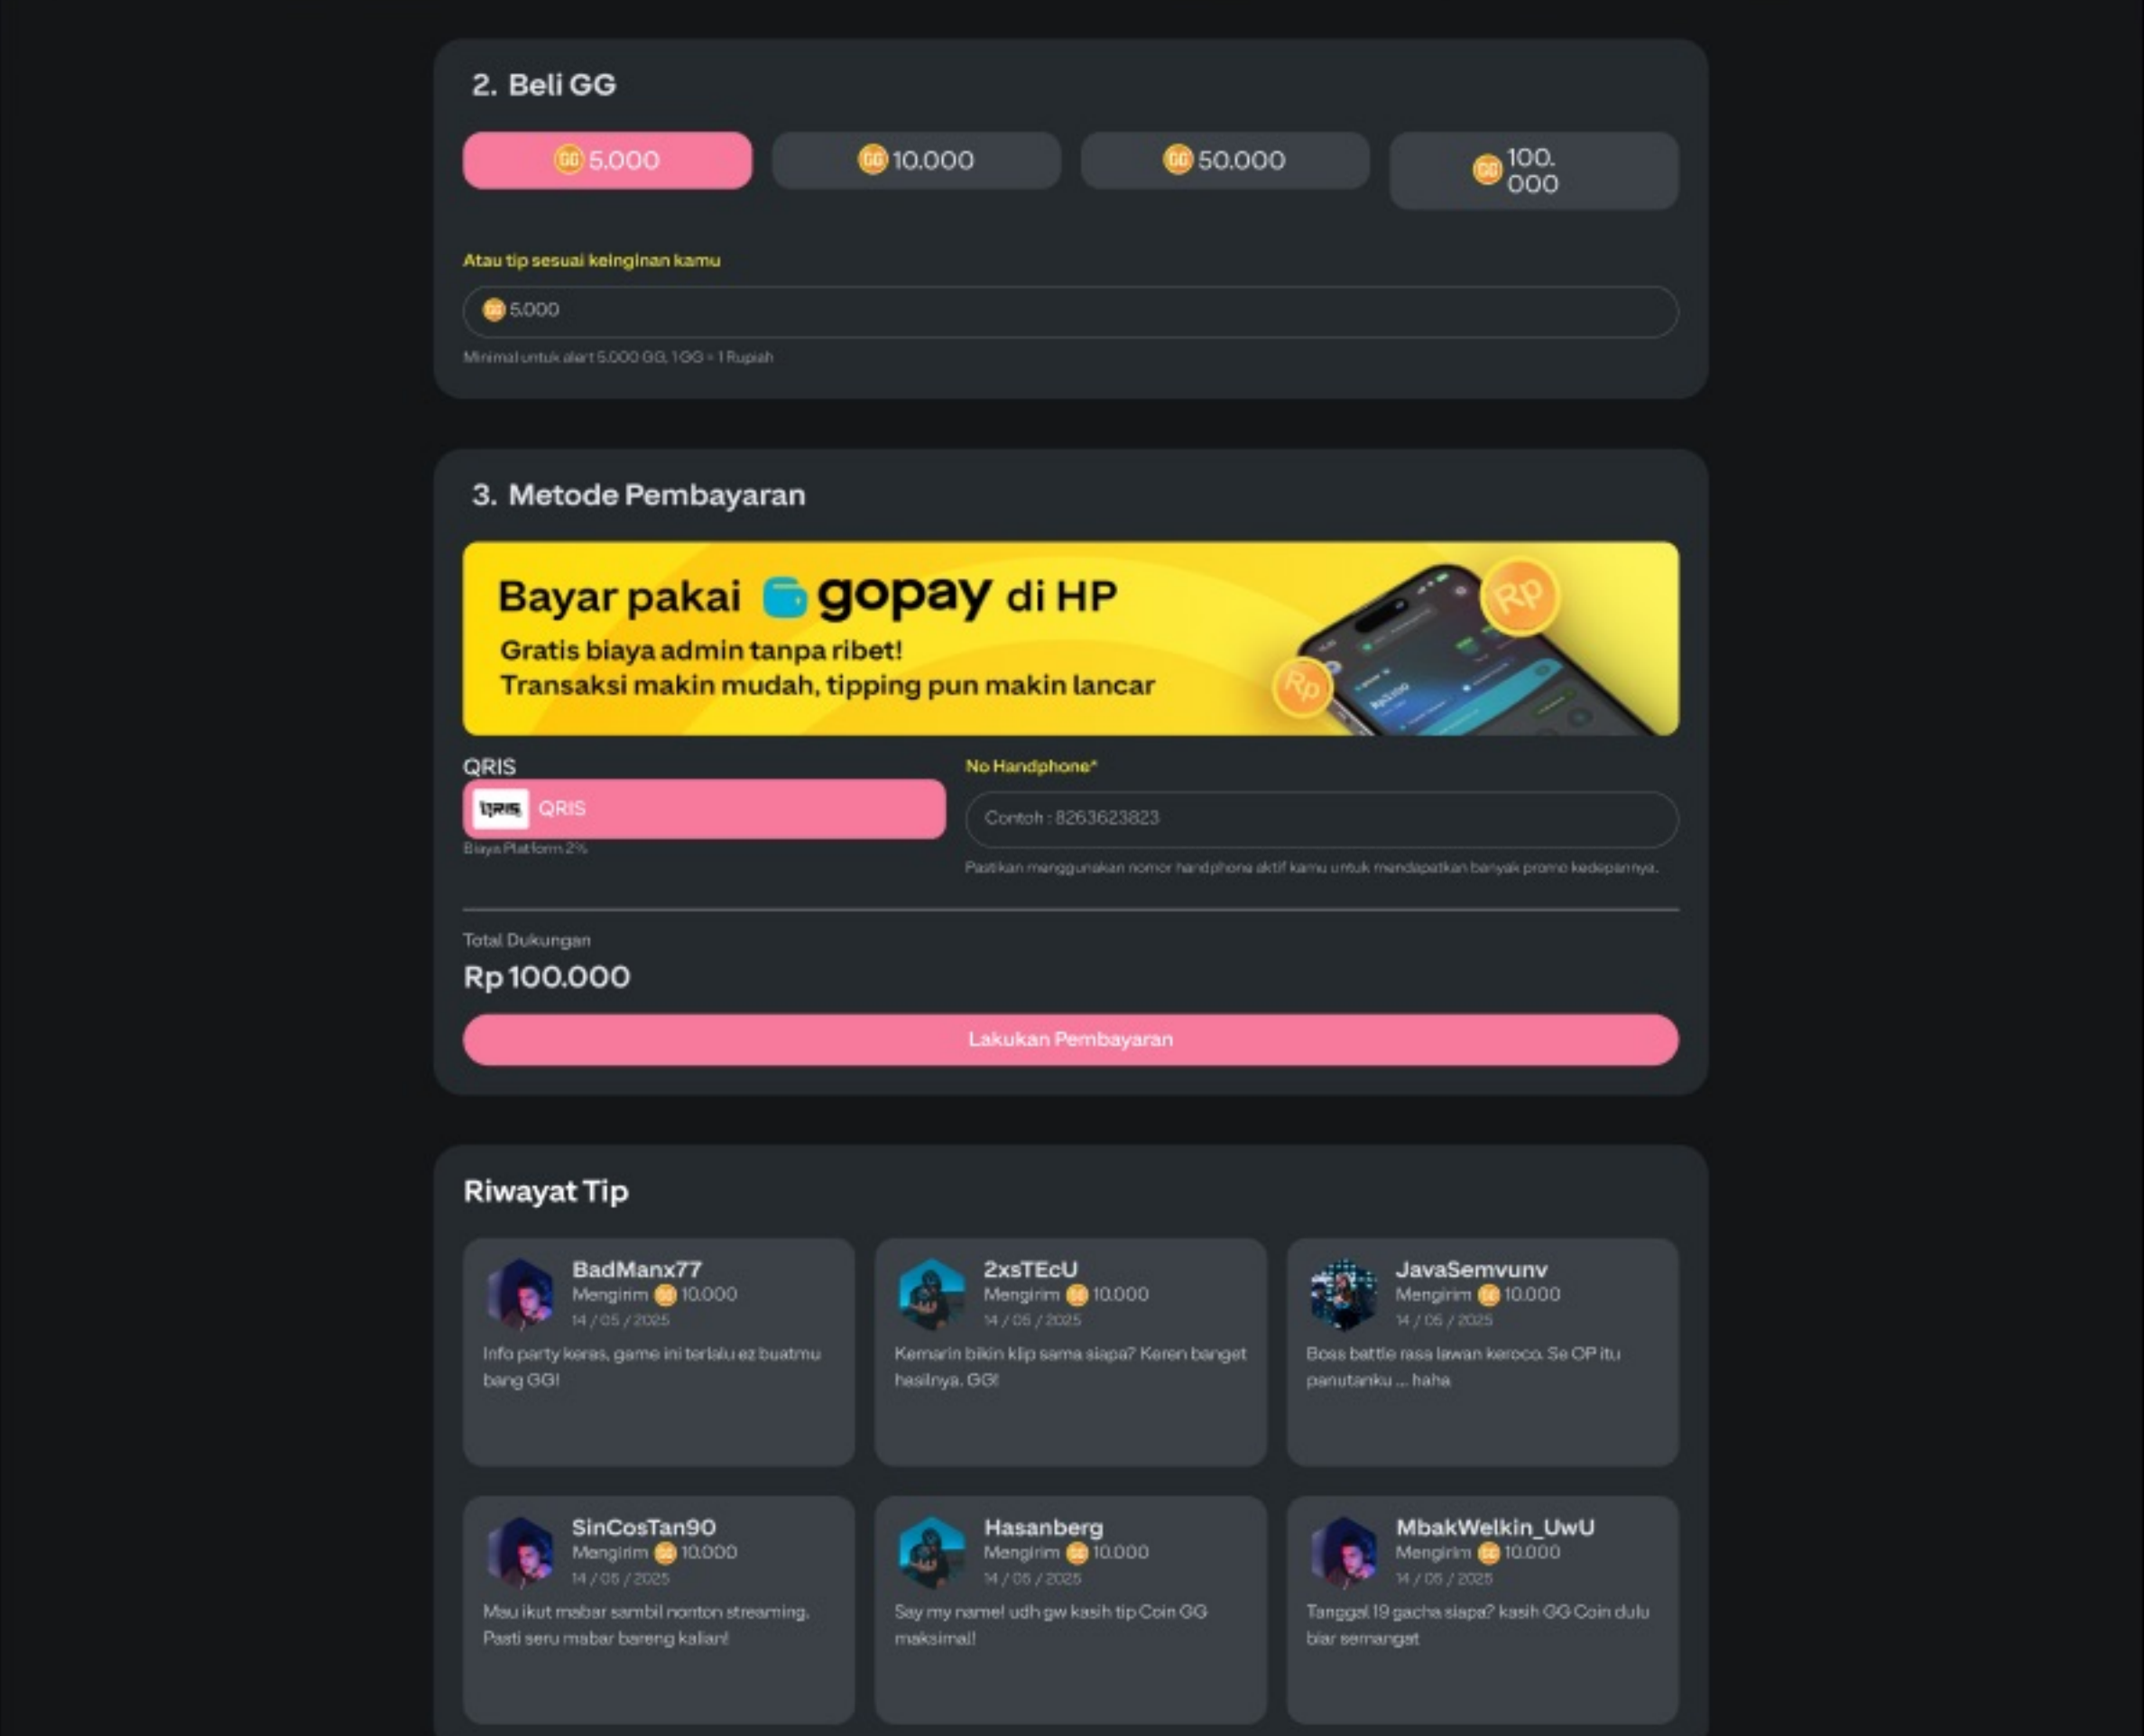

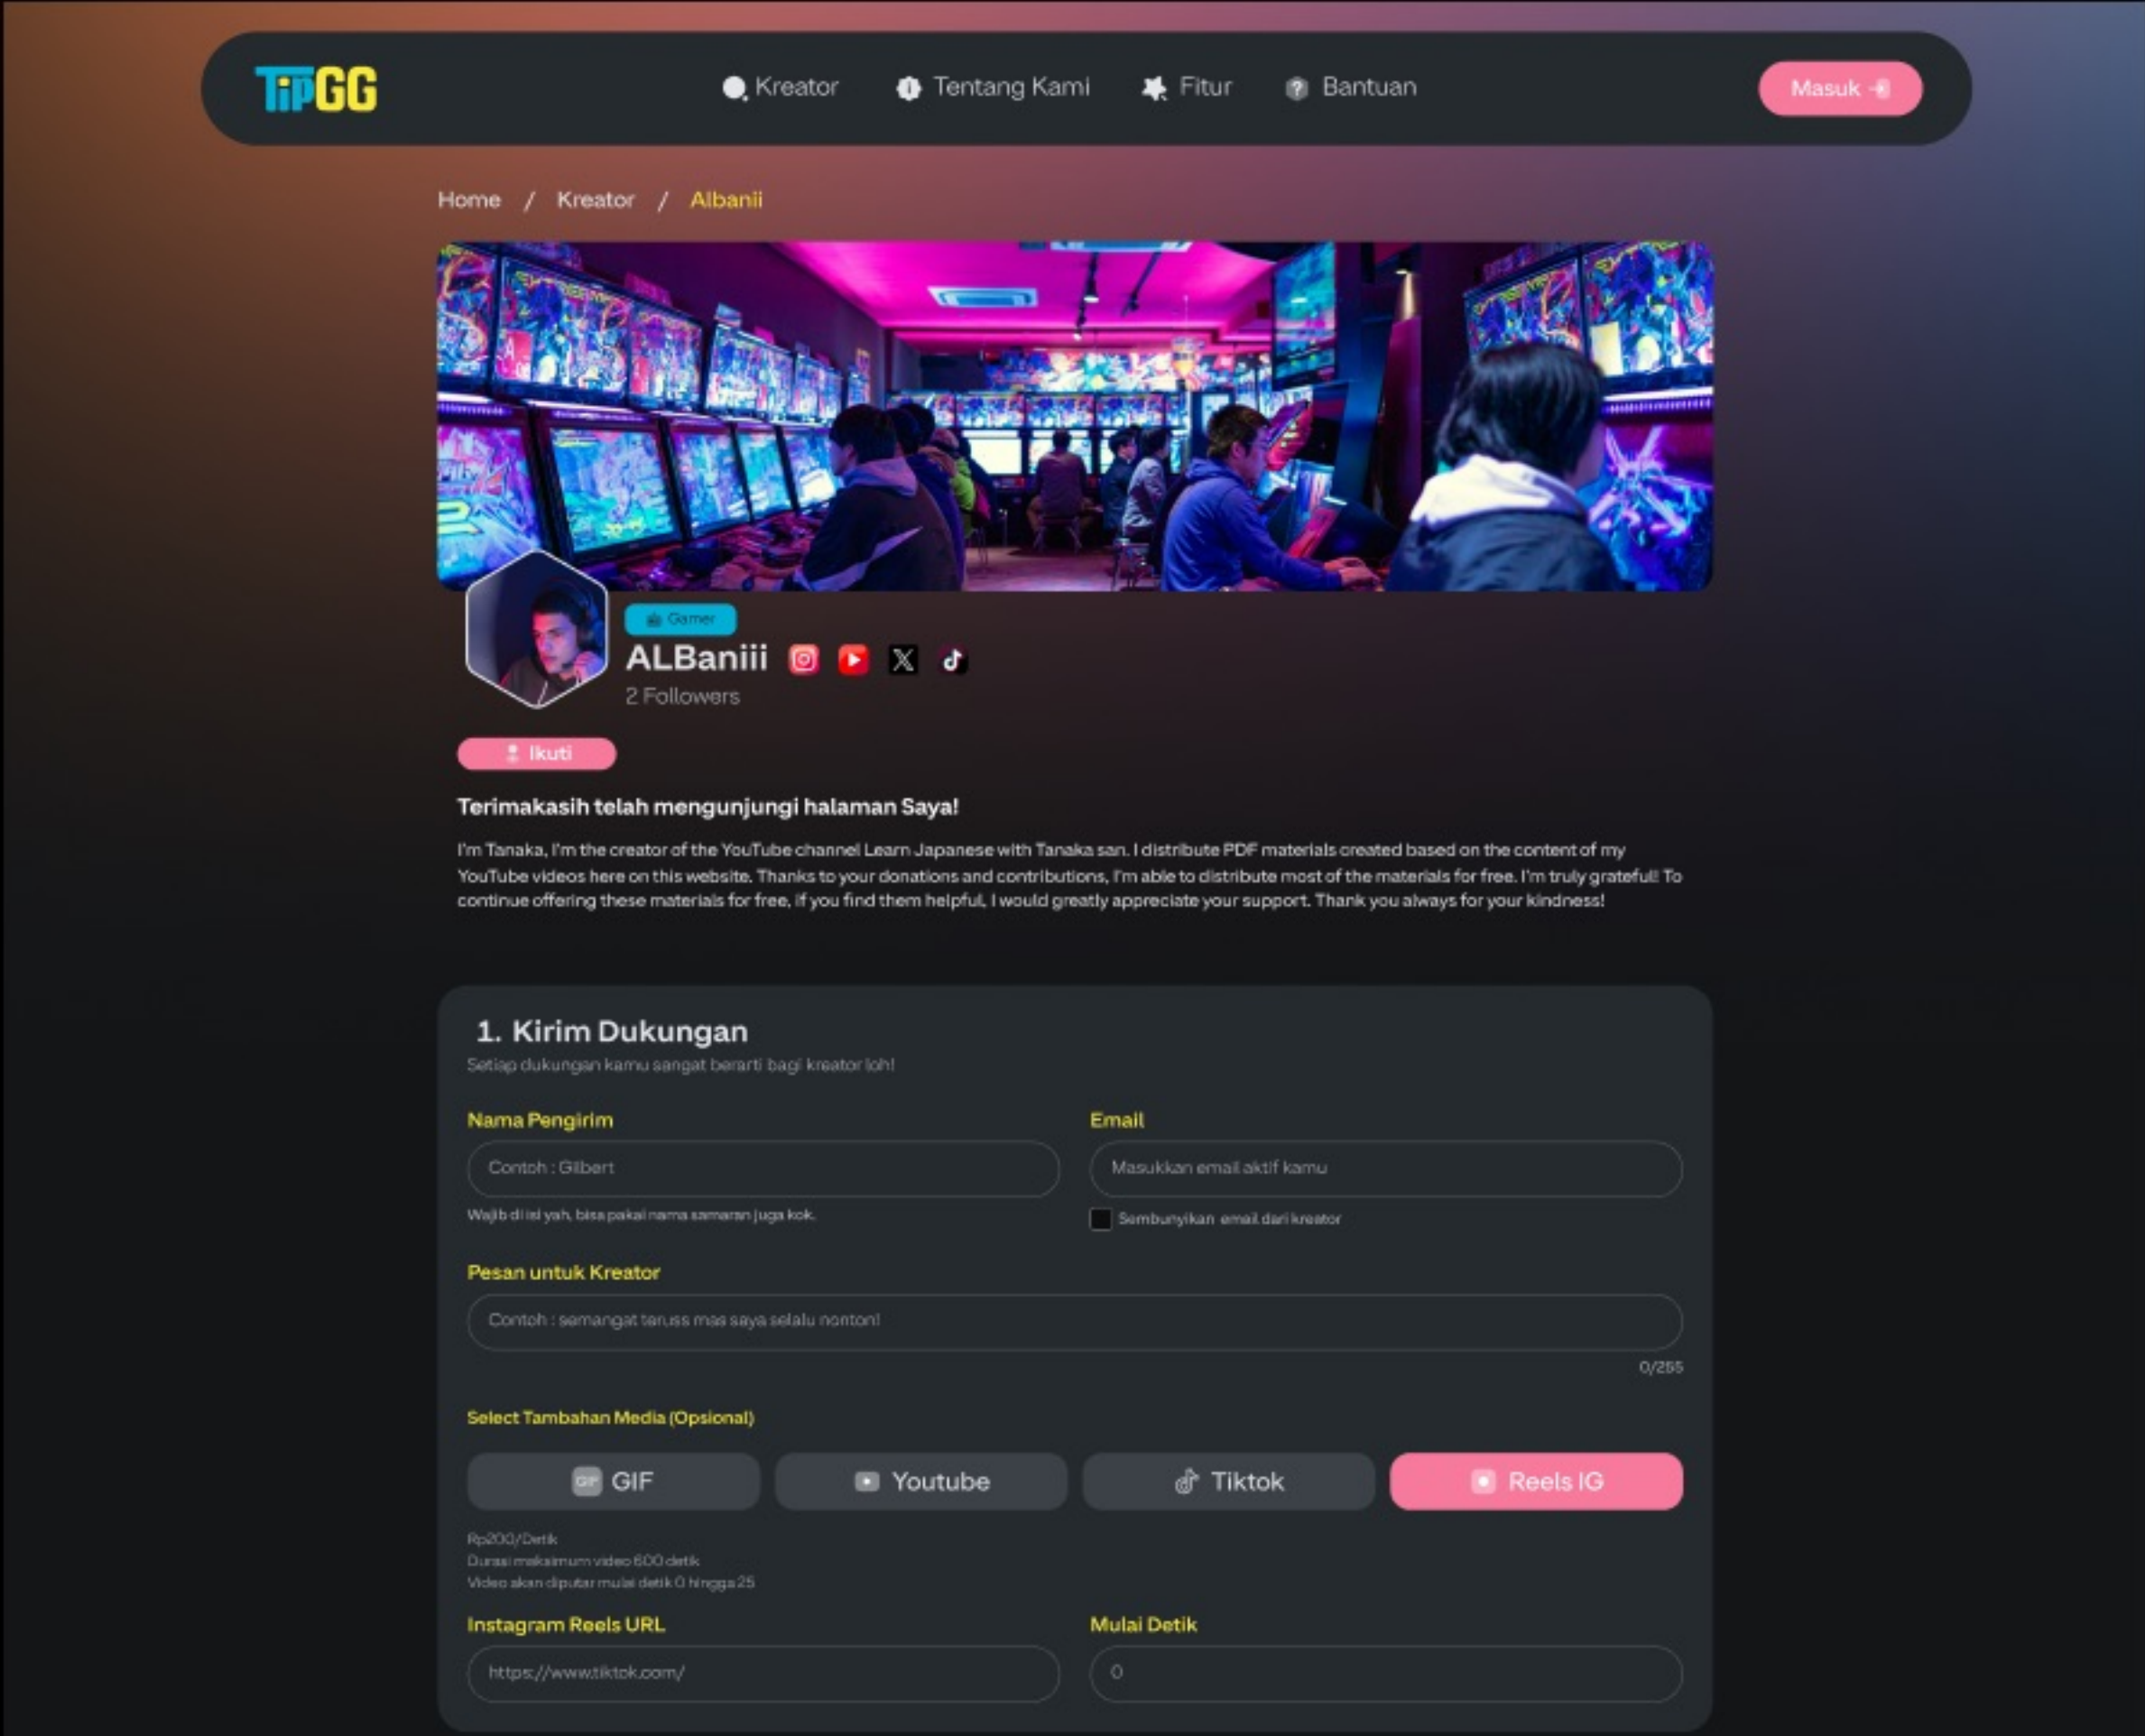

TipGG originated from the challenges faced by content creators, who often struggle to find a platform that allows them to stream seamlessly while also receiving donations from their viewers. To address this need, the TipGG project was created as a solution that helps streamers manage their streaming activities more easily, while also making it simpler for viewers to donate and discover their favorite creators.

The design process involved multiple stakeholders. In this project, I took the role of a UI/UX Designer, focusing on understanding the brief, which emphasized creating an experience that is interactive, playful, and incorporates elements of gamification. For the full results, please refer to the previous slide link.

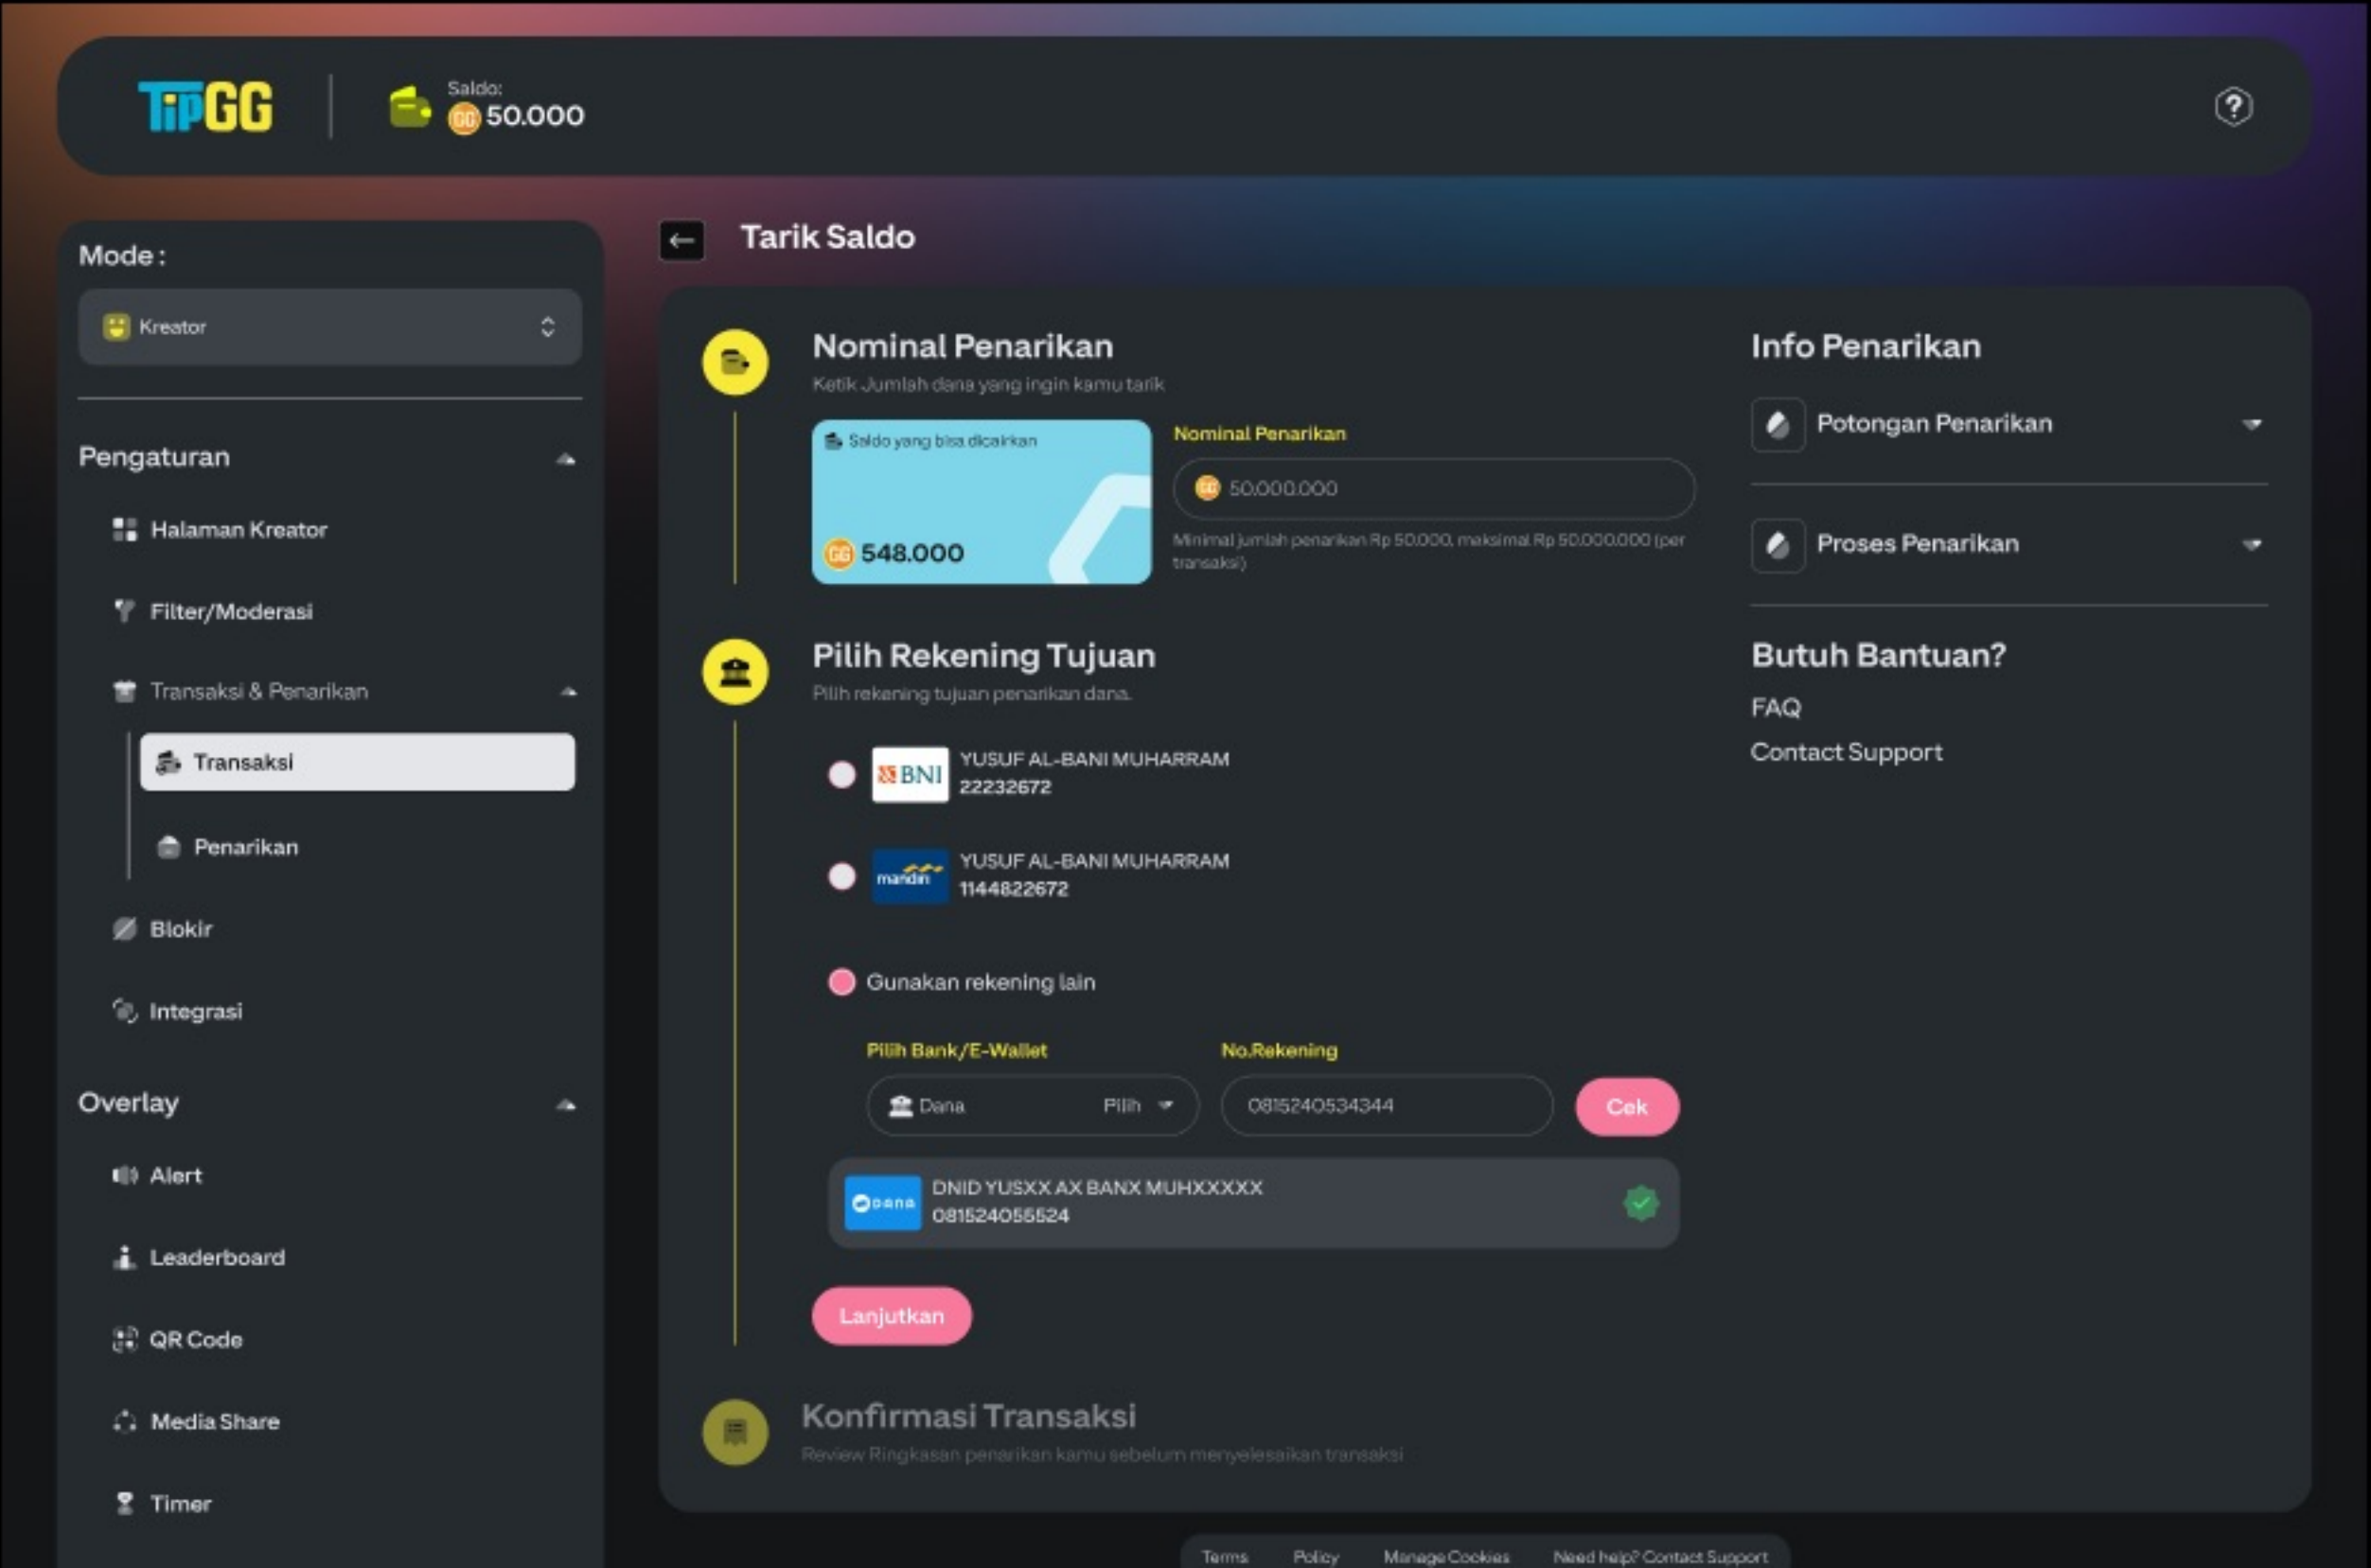

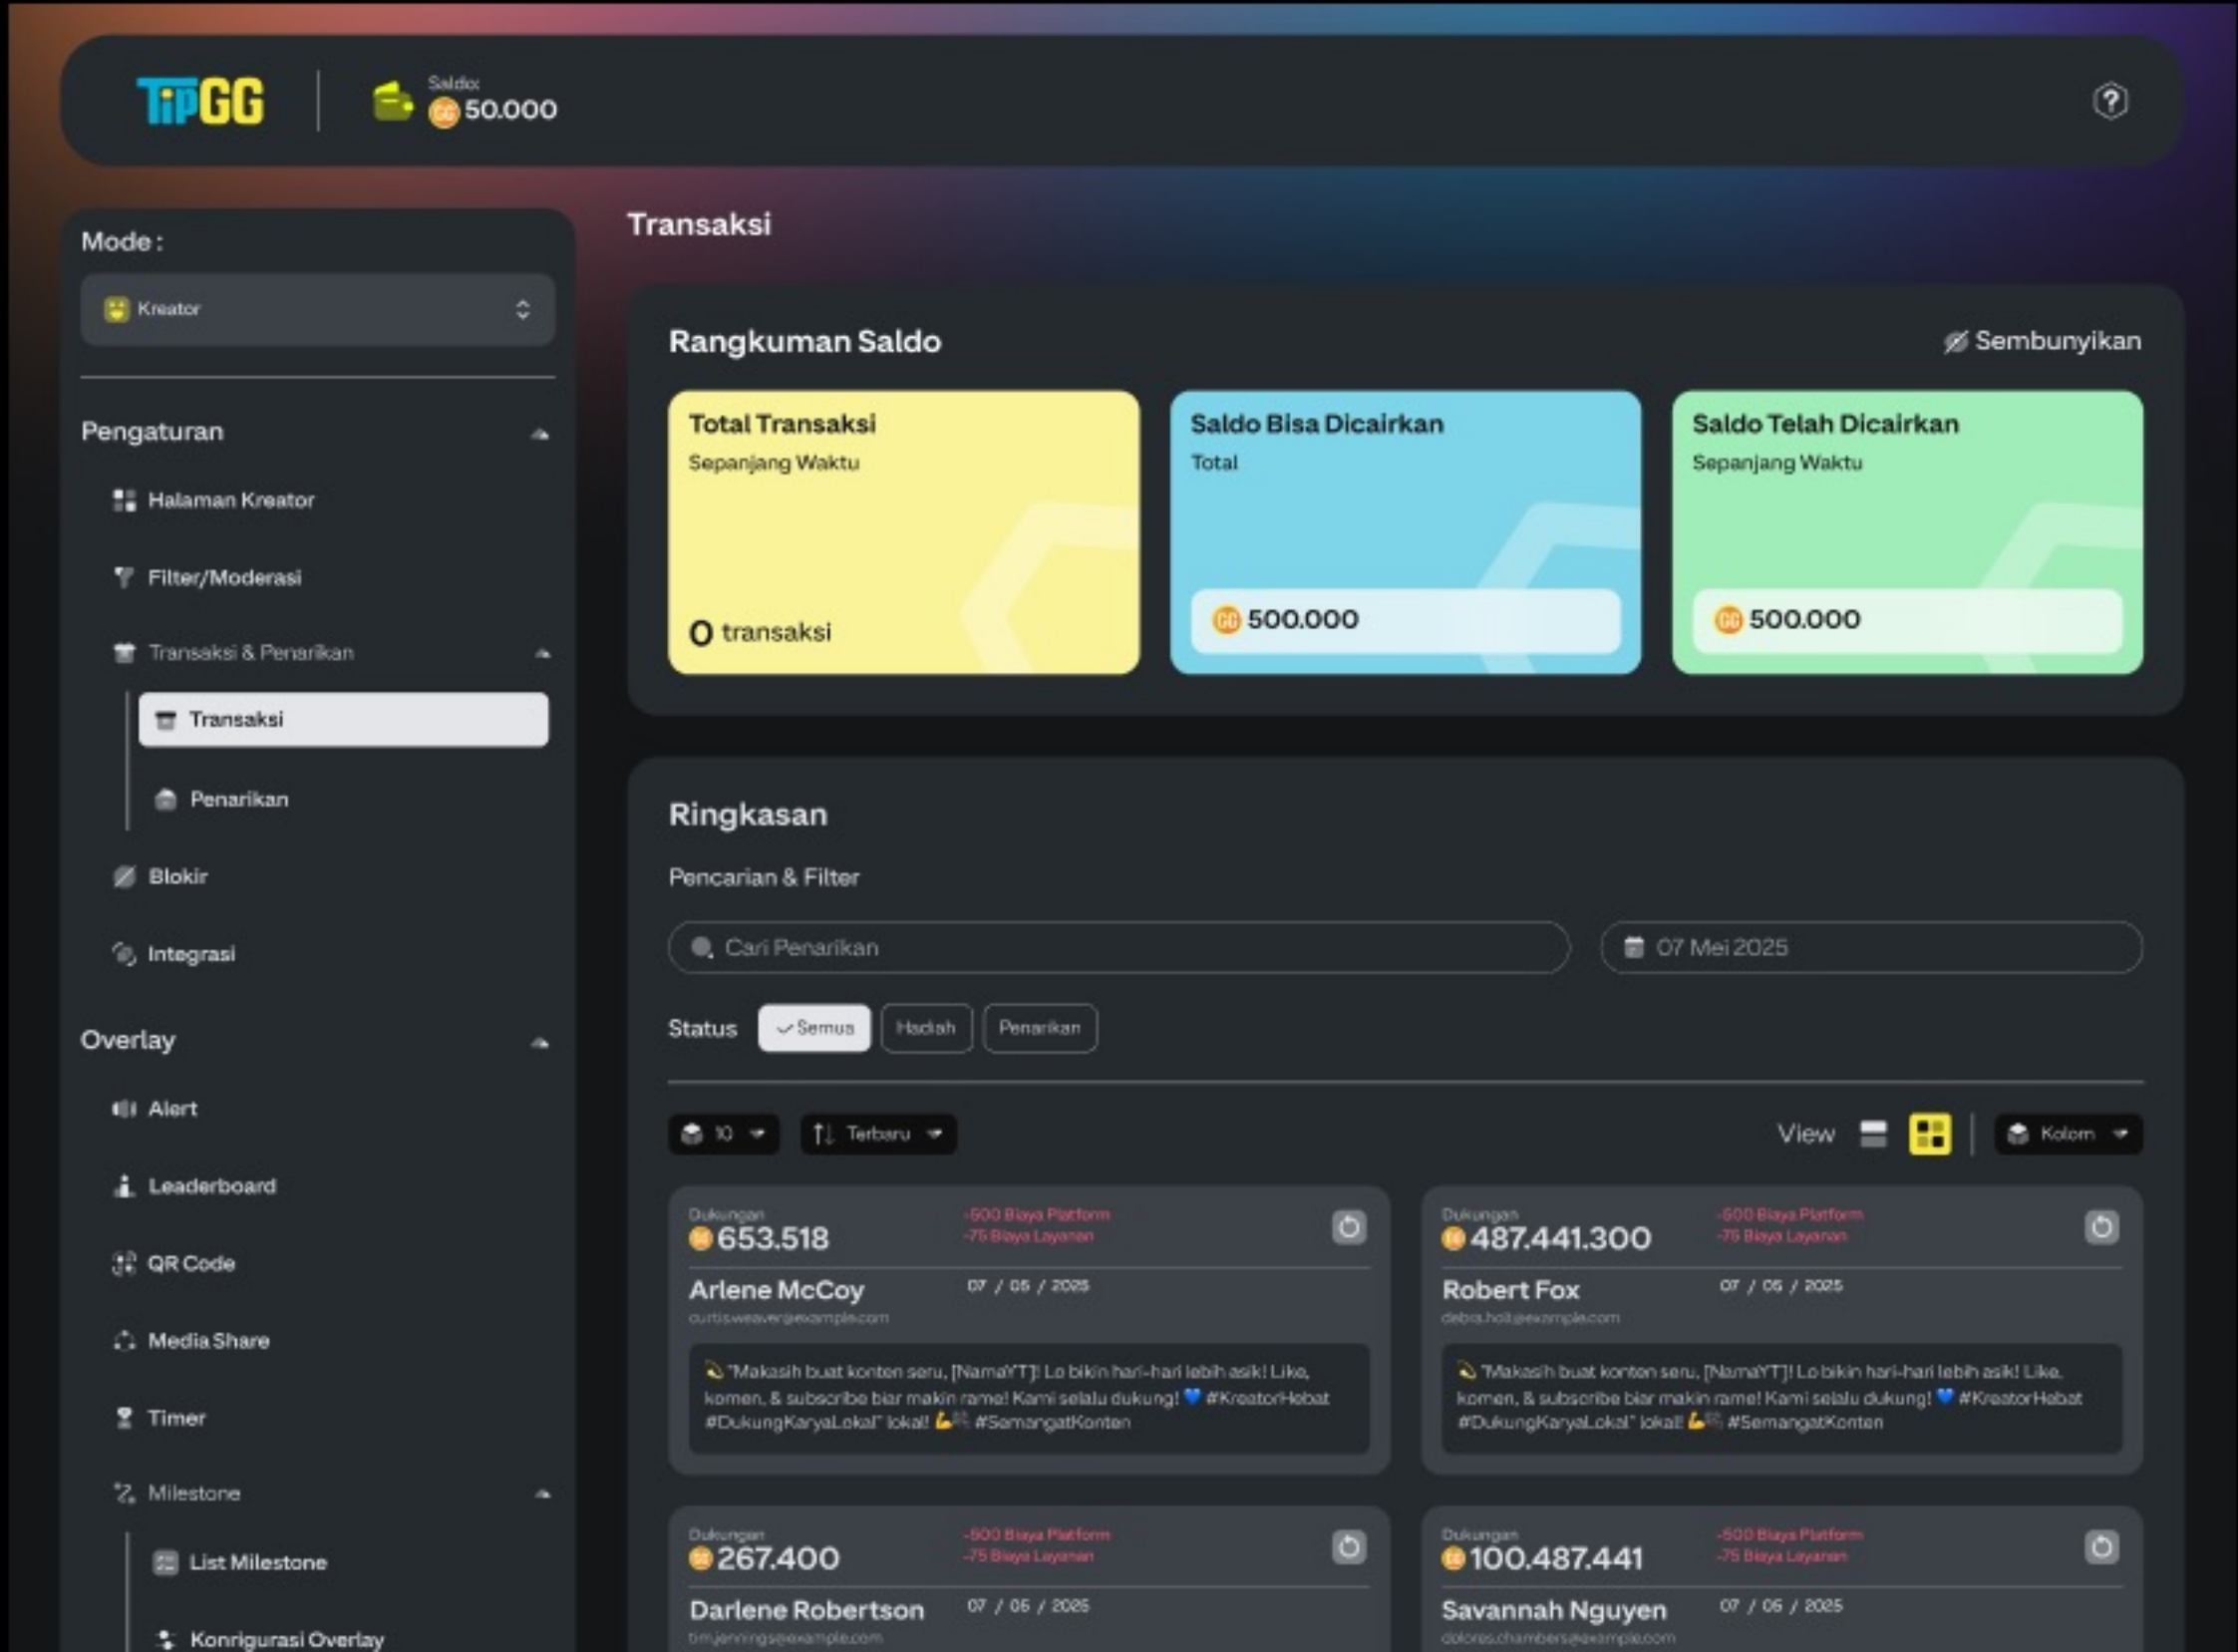

This website is relatively complex as it encompasses multiple features: an interactive landing page, creator exploration, a viewer's POV when making donations, a streamer's POV when managing streaming settings and payment accounts, and even a back-office for the development team to handle future maintenance.

To better understand user needs, I conducted user research focusing on viewer behavior when making donations. Through this research, I identified their main pain point: difficulty in clearly understanding how to donate in a simple way. Based on these findings, I designed a step-by-step donation flow that is more intuitive, helping users better understand and complete the donation process with ease.

Here is an example of a small subset of features available for creators when setting up their streaming (accessible via the sidebar on the website). The two screens I've shared illustrate the scenario when a user is streaming and receiving donations. In this view, streamers can see who donated, the amount, the time, and even access a replay feature in case they forget to acknowledge or want to mention the donation again. The display was initially designed as cards but can also be switched to a table format, depending on the streamer's needs and aligning with their natural behavior while streaming.

The second UI showcases the process when a streamer wants to withdraw their streaming balance. In this case, I learned how to simplify a relatively lengthy process by breaking it down into multiple step-by-step flows. This approach helps reduce user frustration, especially since this is a critical step. The design was created with a deep focus on understanding user behavior and needs, ensuring the flow remains clear, intuitive, and easy to follow.

VocaGame

VocaGame provides the most affordable and trusted game top-up and voucher reseller services in Indonesia, offering top-ups for over 100 leading online games worldwide. Support multi regional.

Mobile Application

Website

TOKKO Tokko

An application designed to assist culinary businesses owner in determining product selling prices.

Role

UX Designer & Researcher

Project Duration

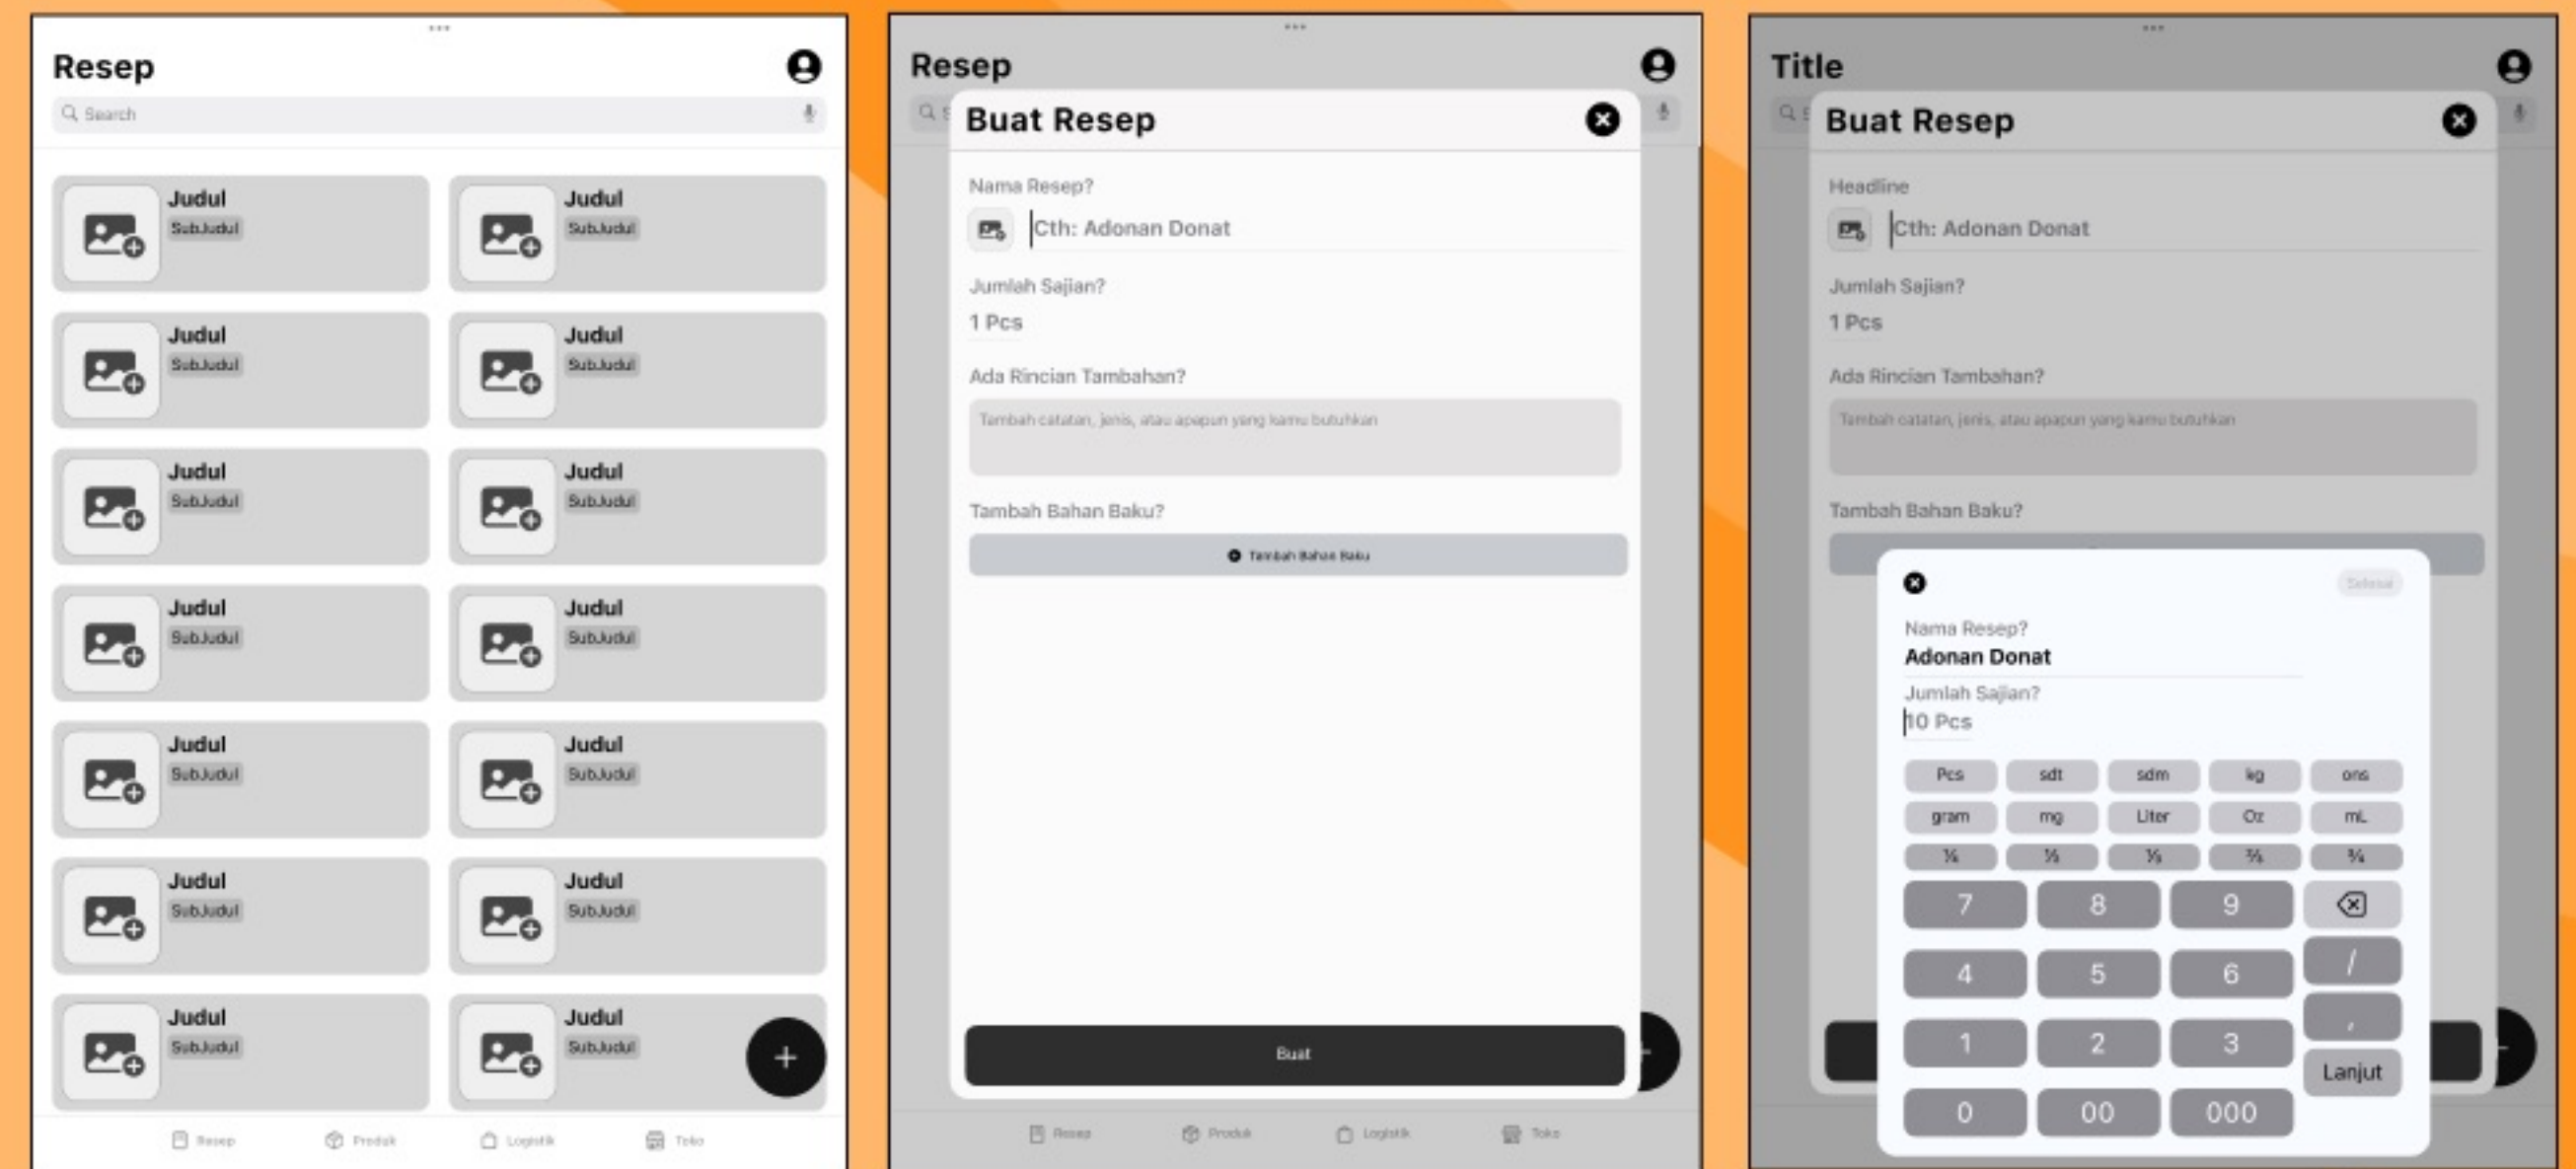

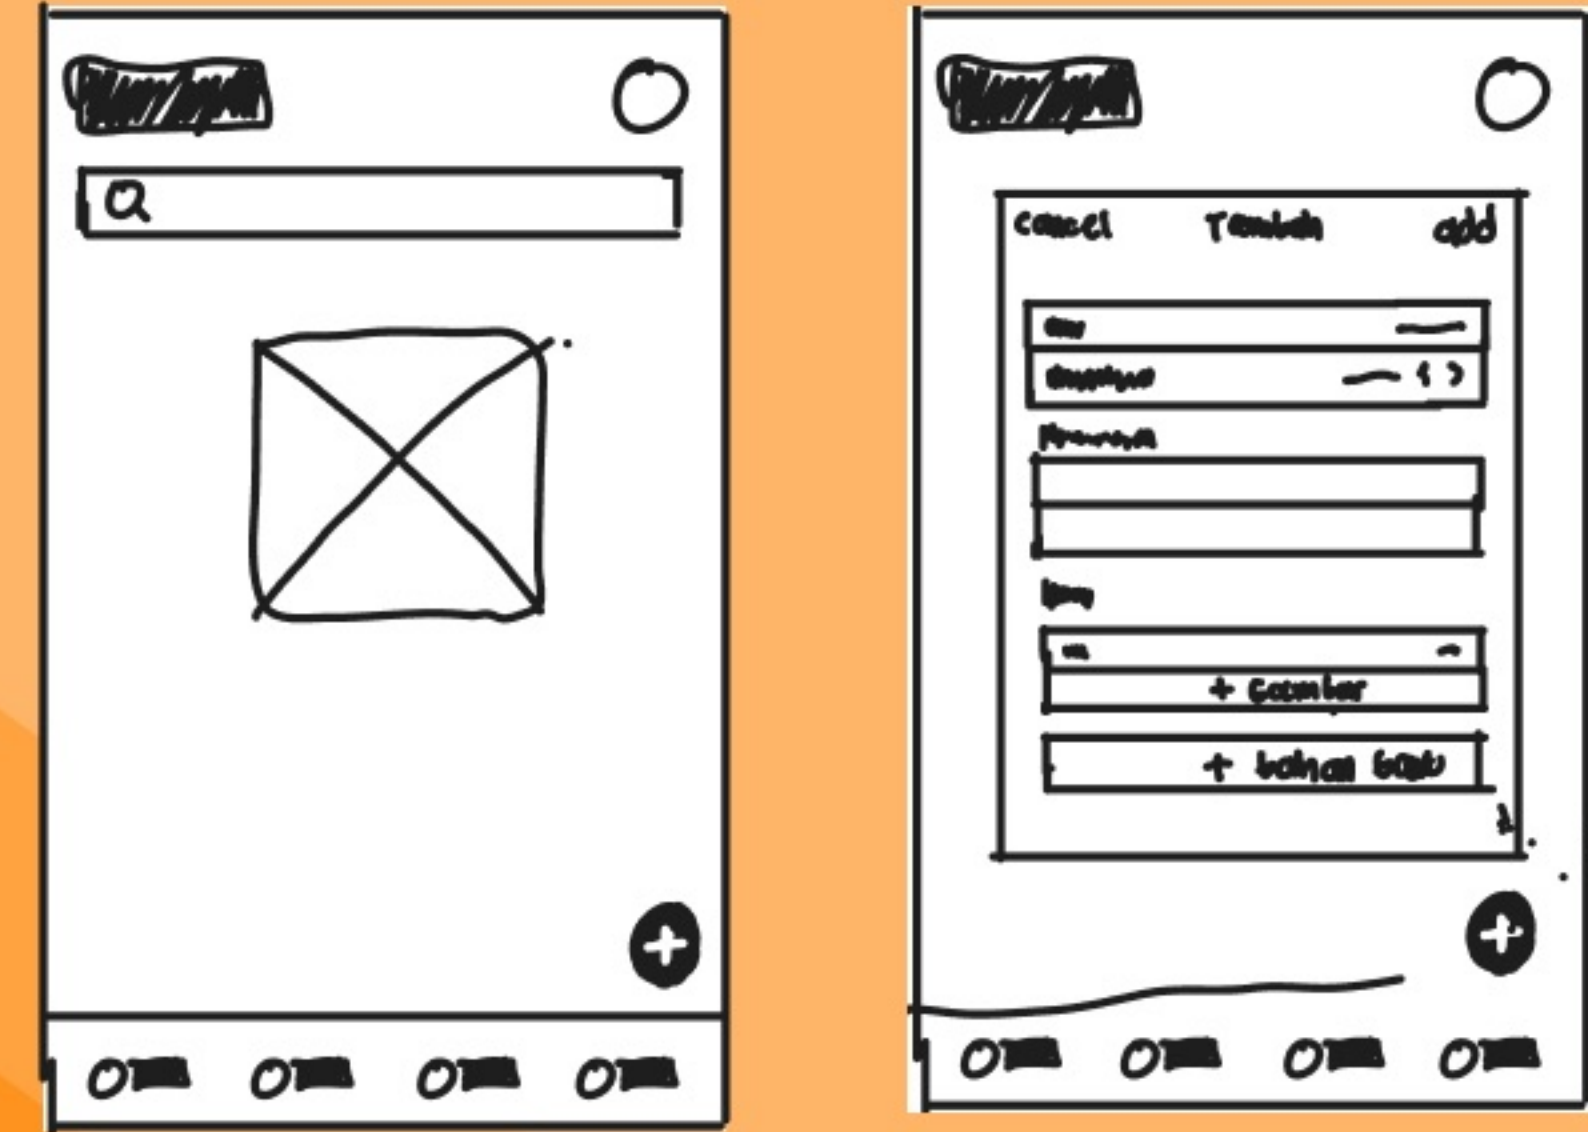

Sep - Dec 2024

Tools

When I was a **UI/UX Designer**, I was responsible for making a solution into a product, by creating user flow, low fid, mid fid, to high fidelity.

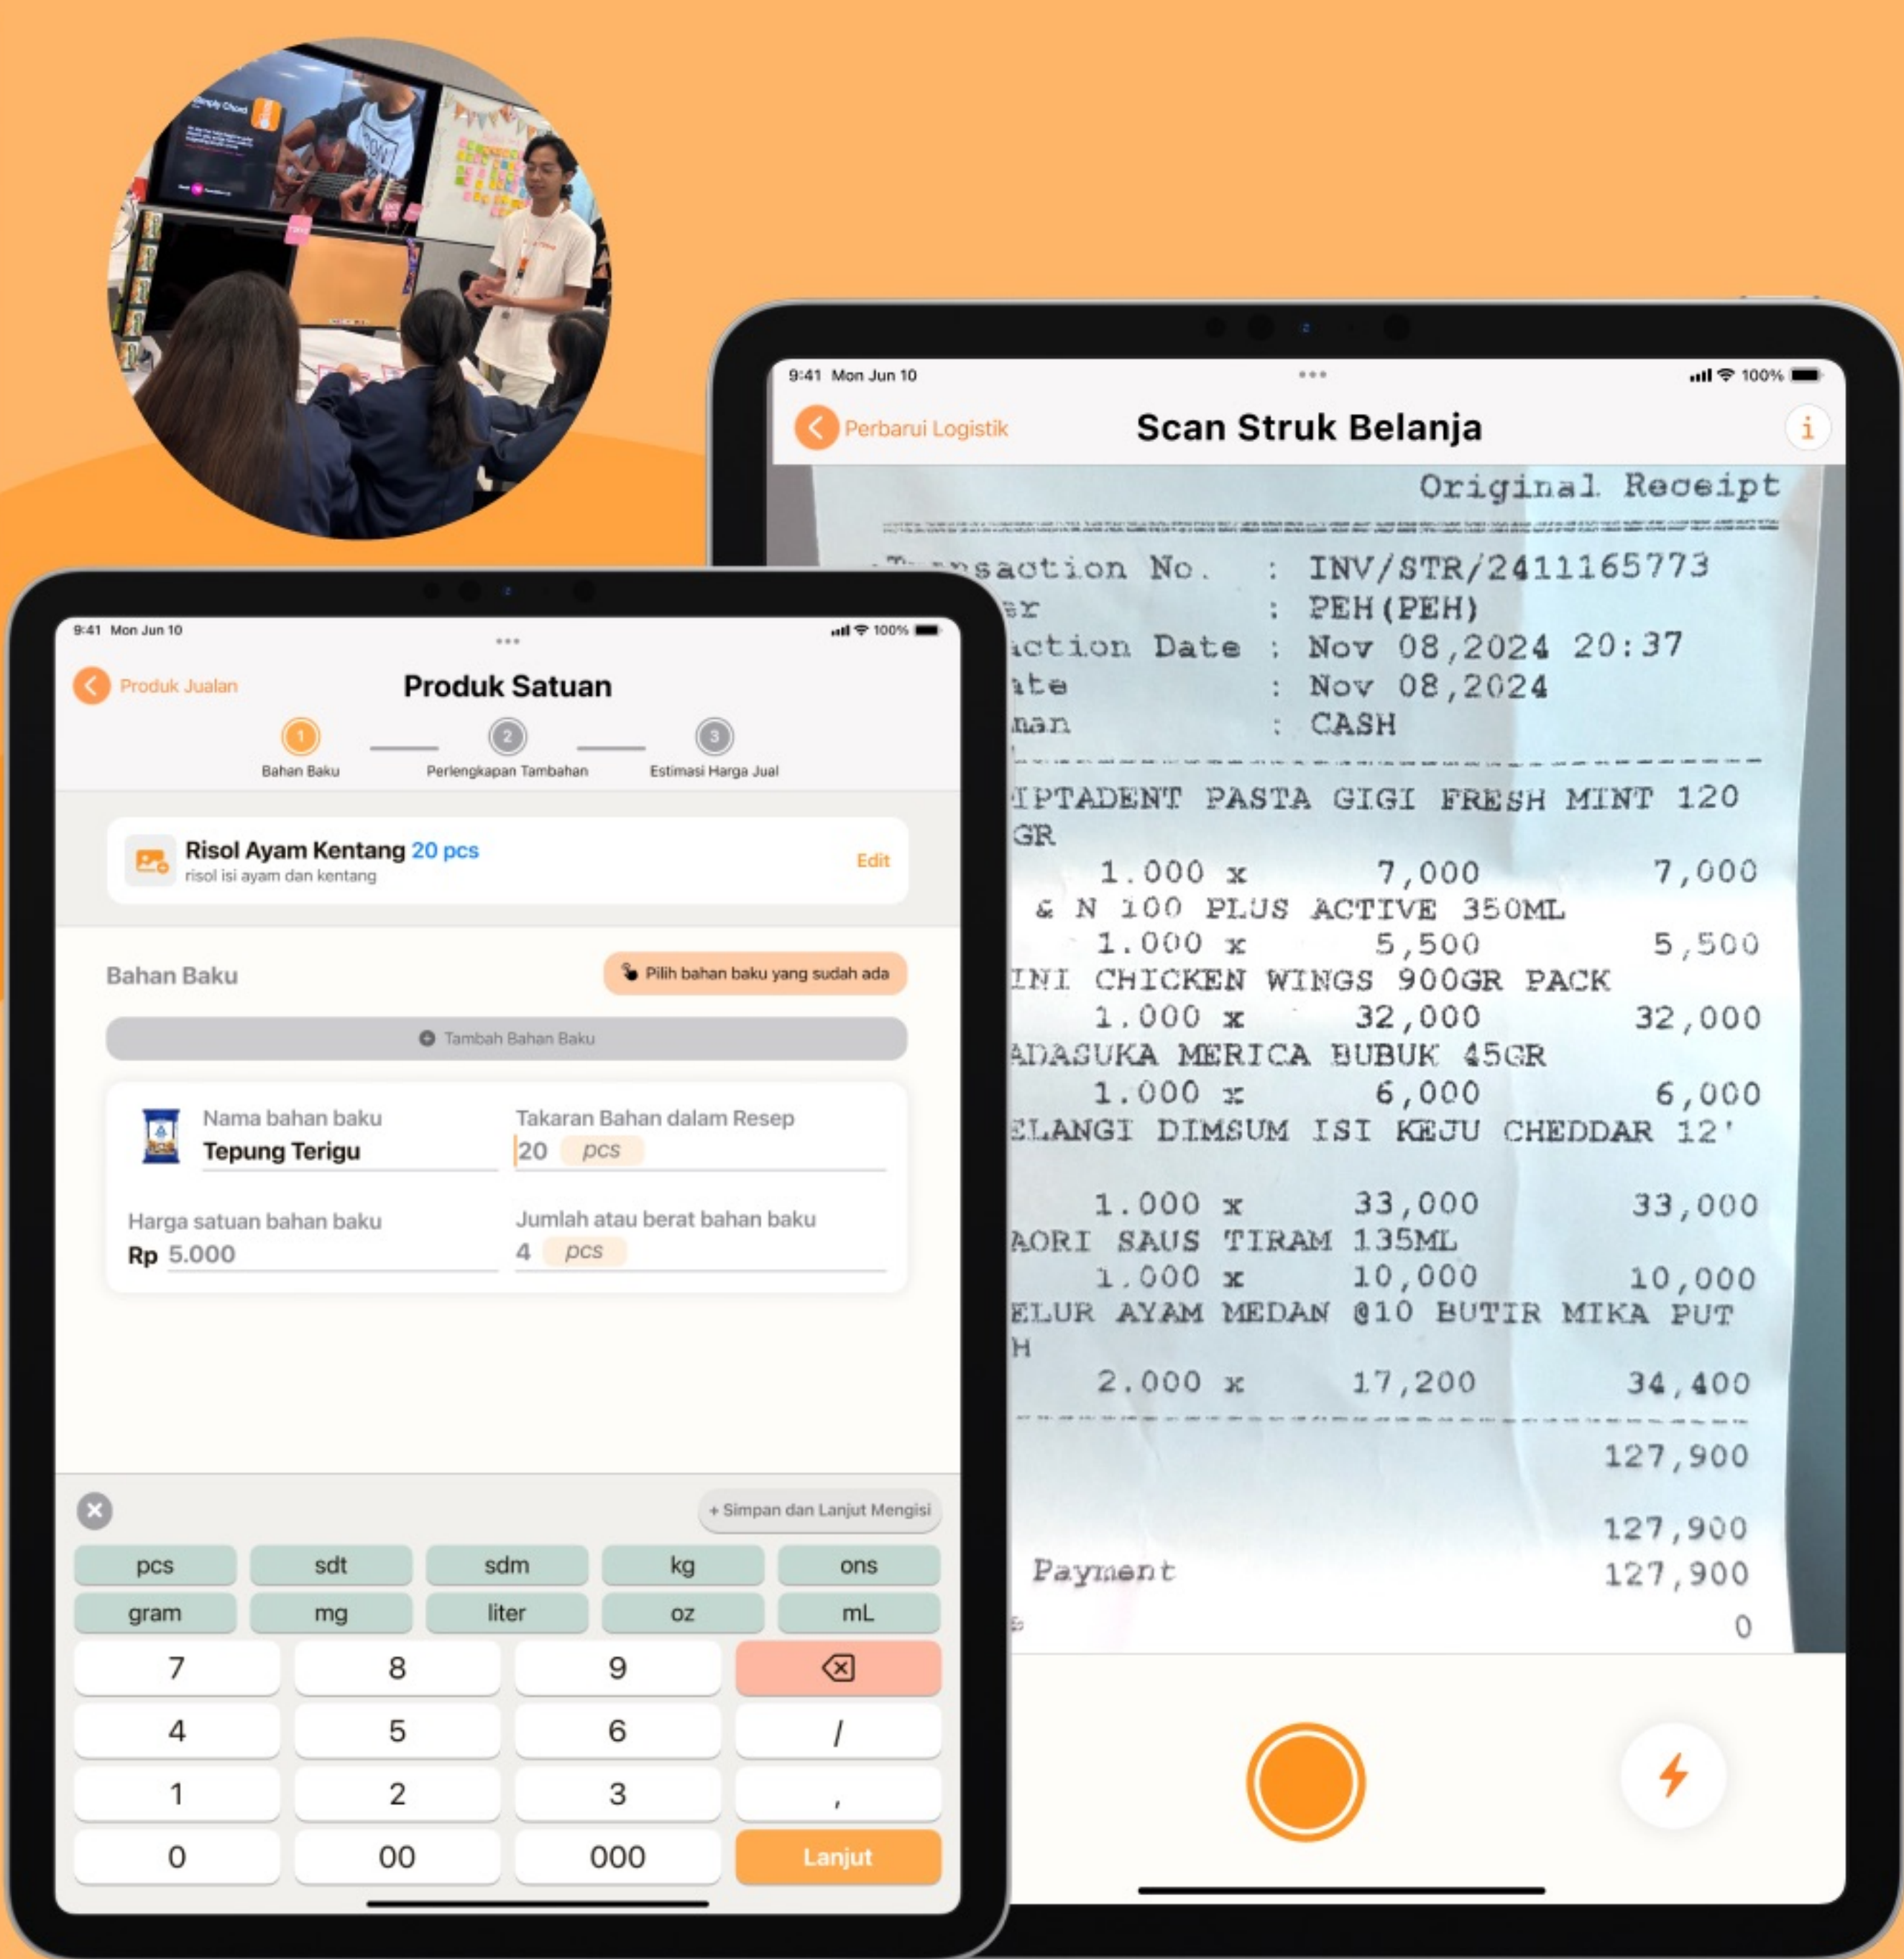

Conducted 4 rounds of usability testing (UT) with highly satisfactory results. During High-Fidelity design UT, **100% of tasks** were successfully completed by prospective users, with a click accuracy rate of **80%**.

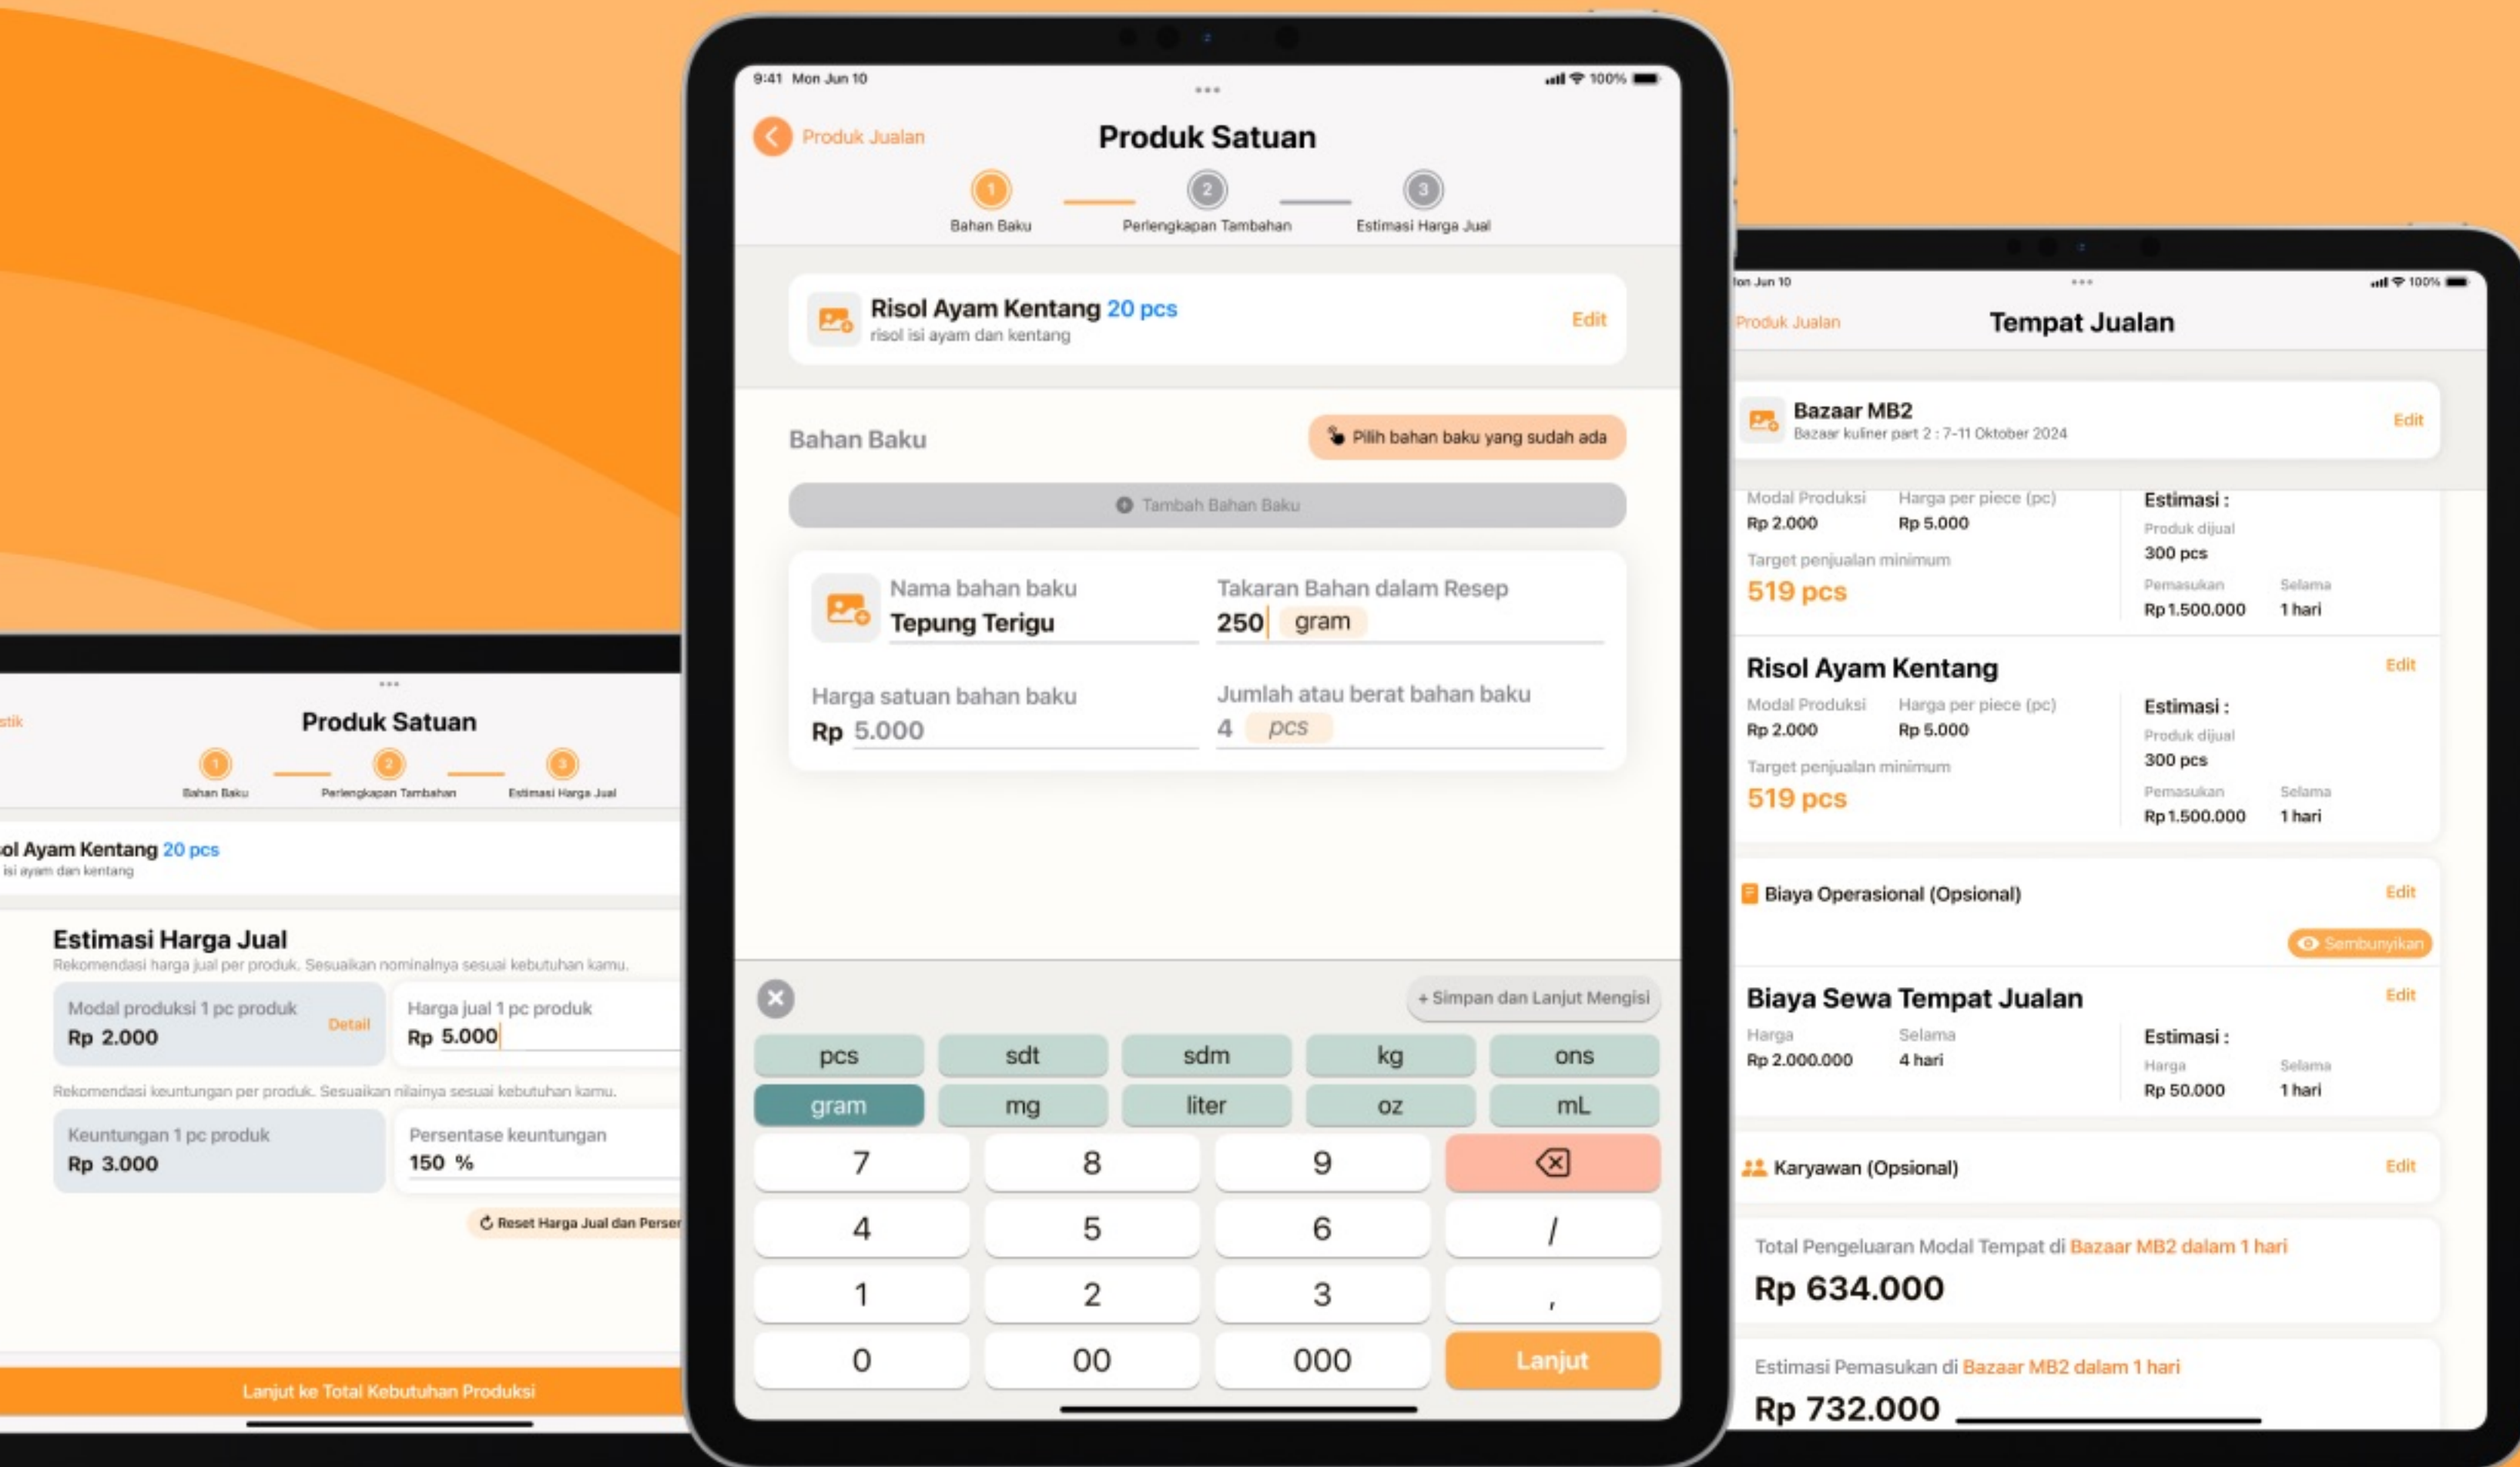

As a **Researcher**, I try to understand the target user's pain point by conducting desk research, observation, and interviews, from the findings and so that user needs and problems are found in determining the selling price of the product.

Applied design thinking to deeply understand user challenges and deliver effective, structured solutions.

Responded to user problems by delivering innovative solutions, such as a **custom keyboard** for inputting weight or measurements of raw materials, applying both creative thinking and analytic thinking.

After the Tokko App v1 was completed, I continued to conduct UT to ensure that the design that was created could be easily used by users by using the moderator method for **5** target users.

By doing several iterations, the App that I designed was successfully used easily by getting a **90%** click rate and positive feedback for the UI from **10** target users.

D.DropApp

D.DropApp v1 (Premium)

A quality webshop
manufacturing service company
and custom premium design.

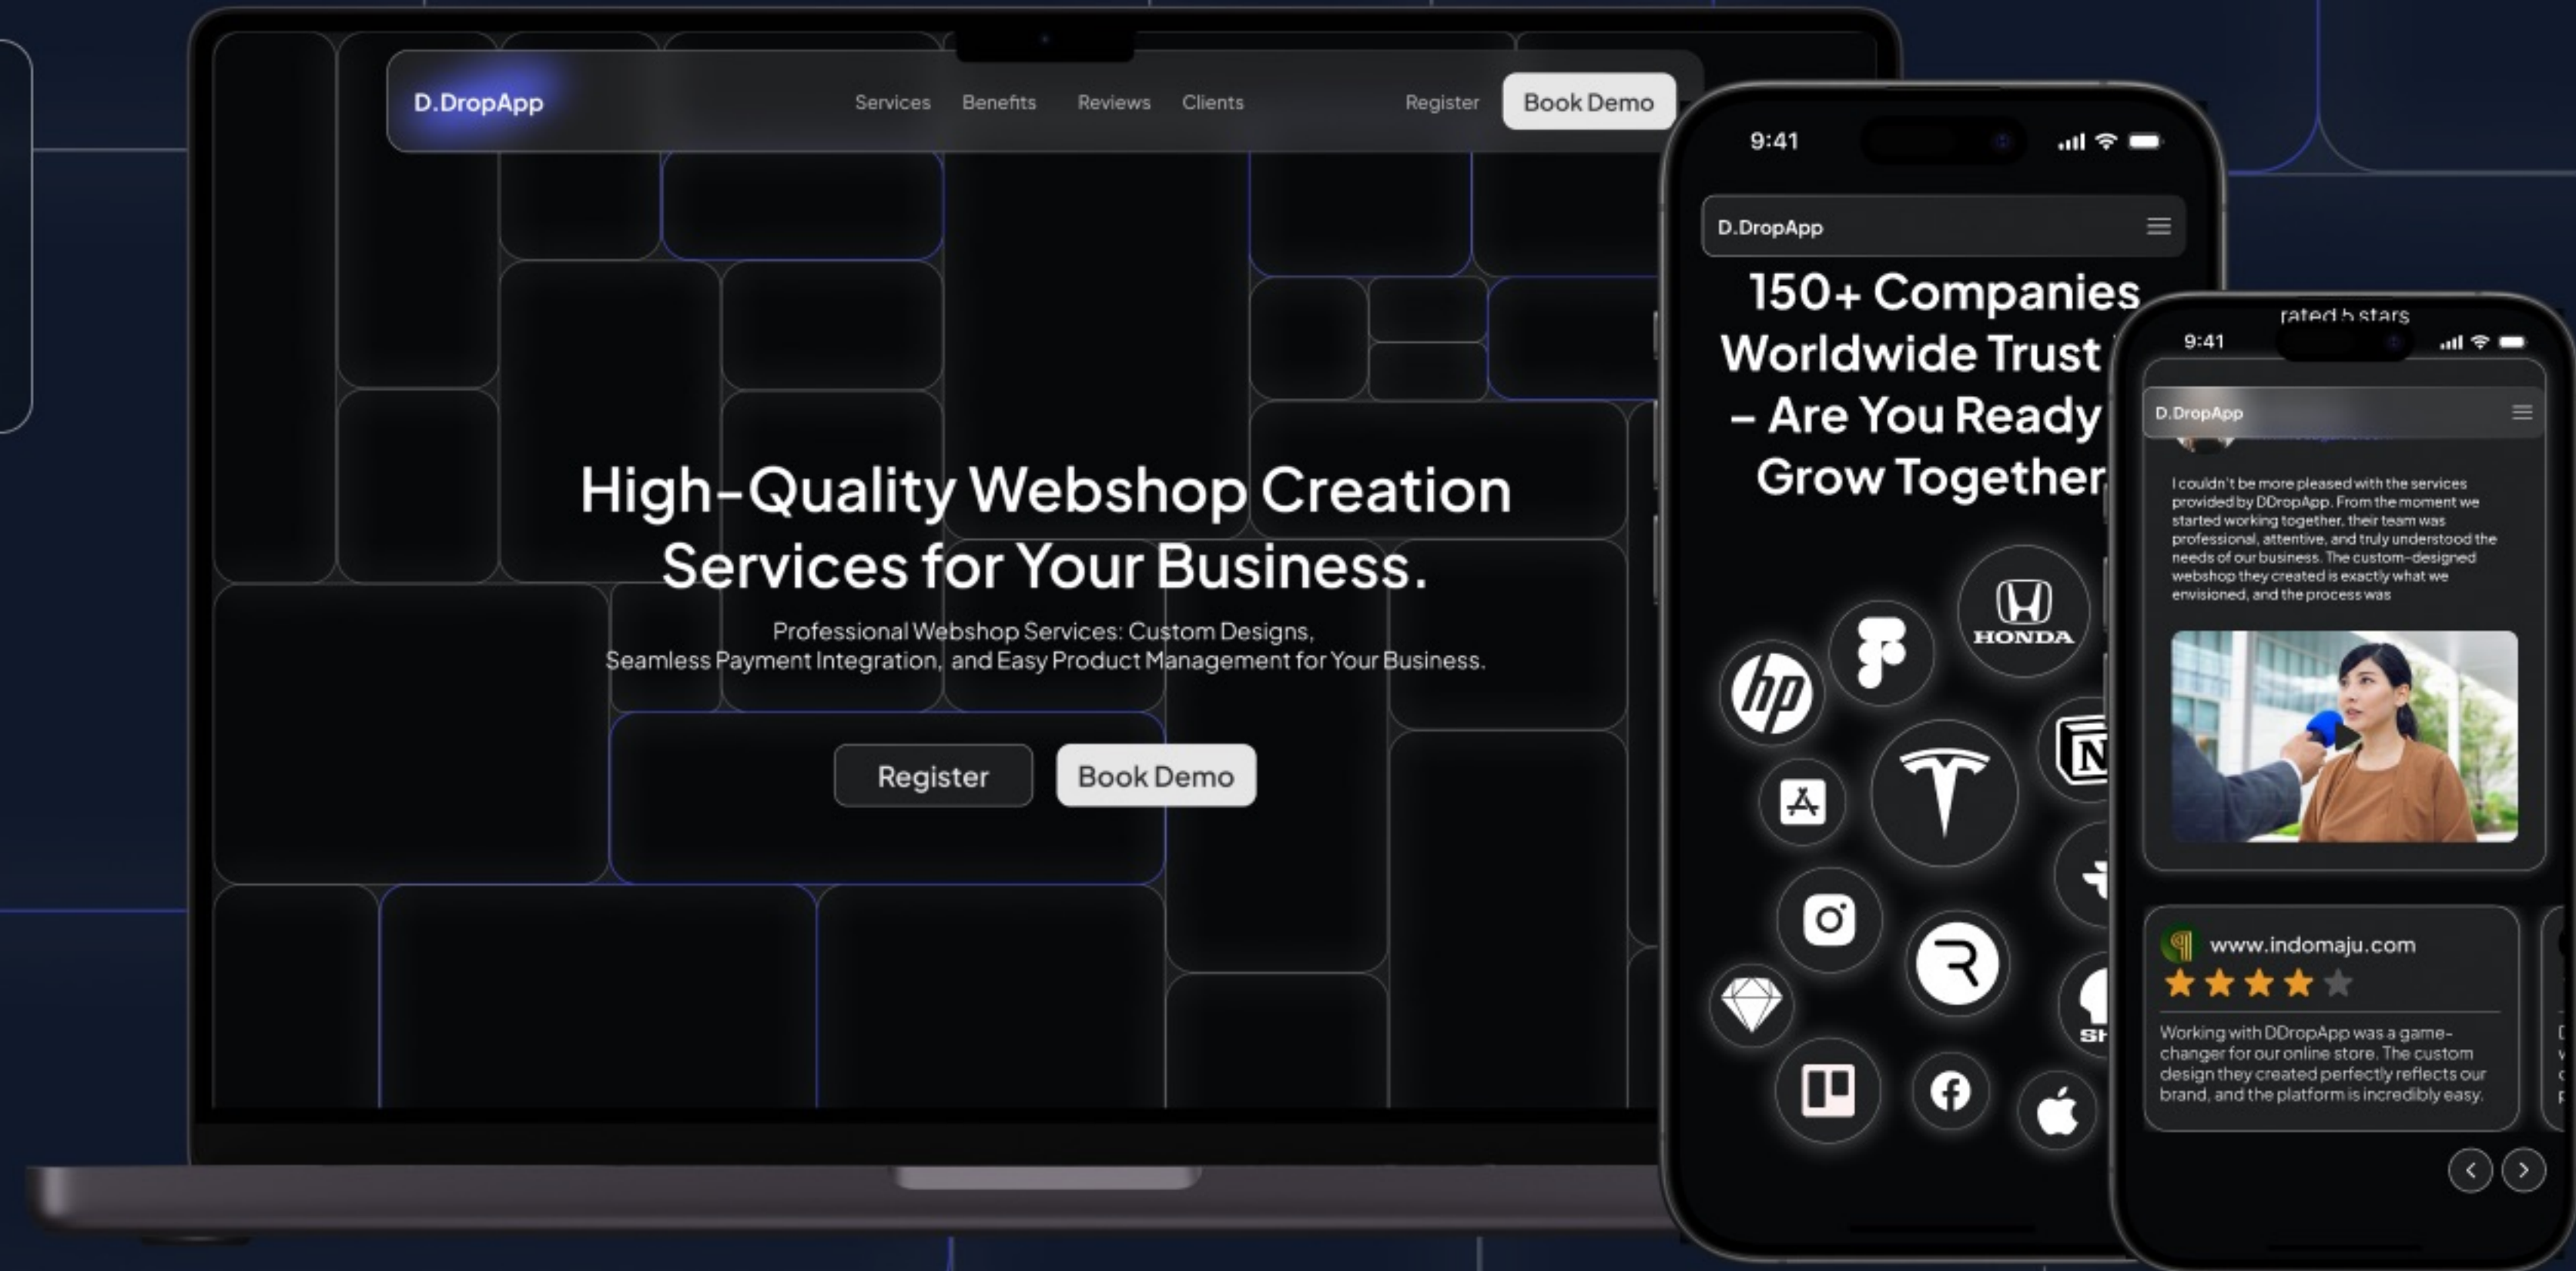

Role

UX Designer & Researcher

Project Duration

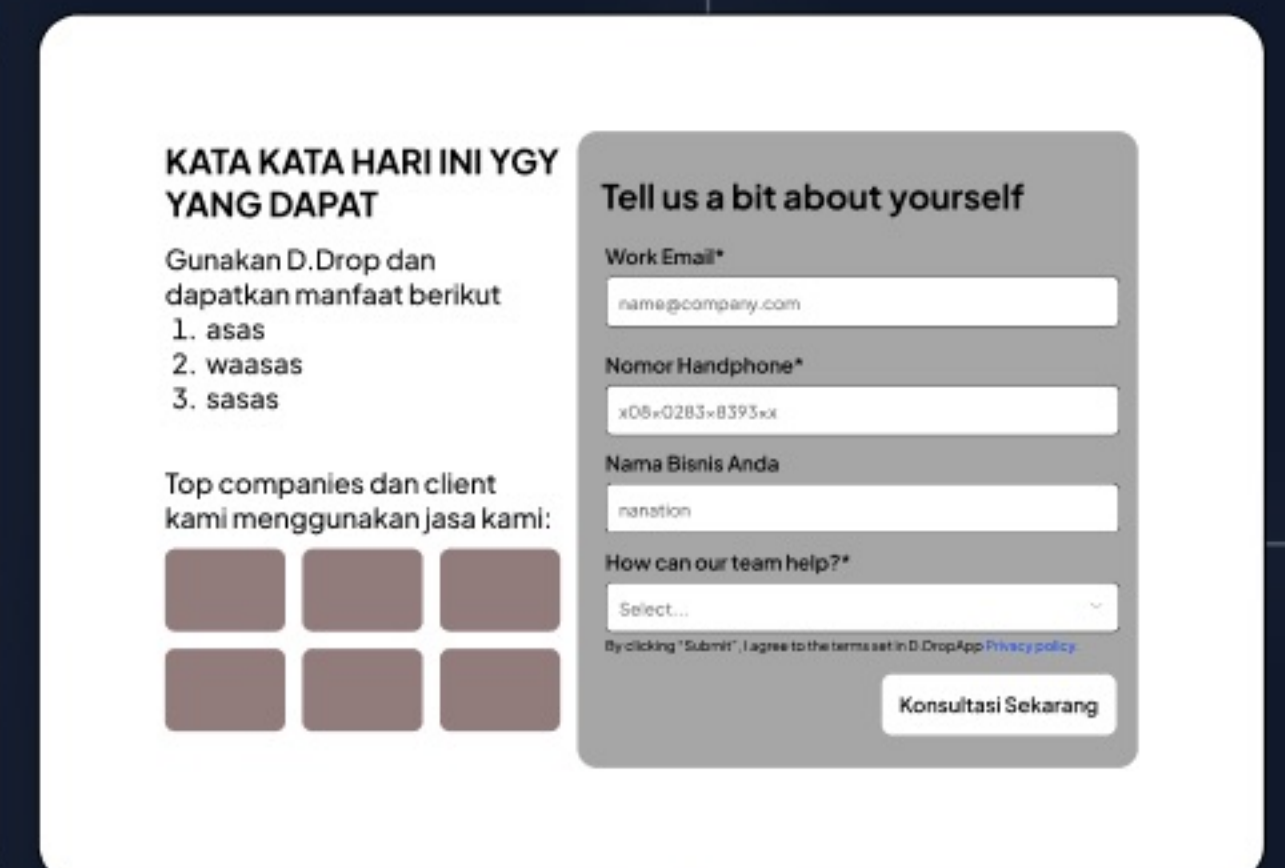

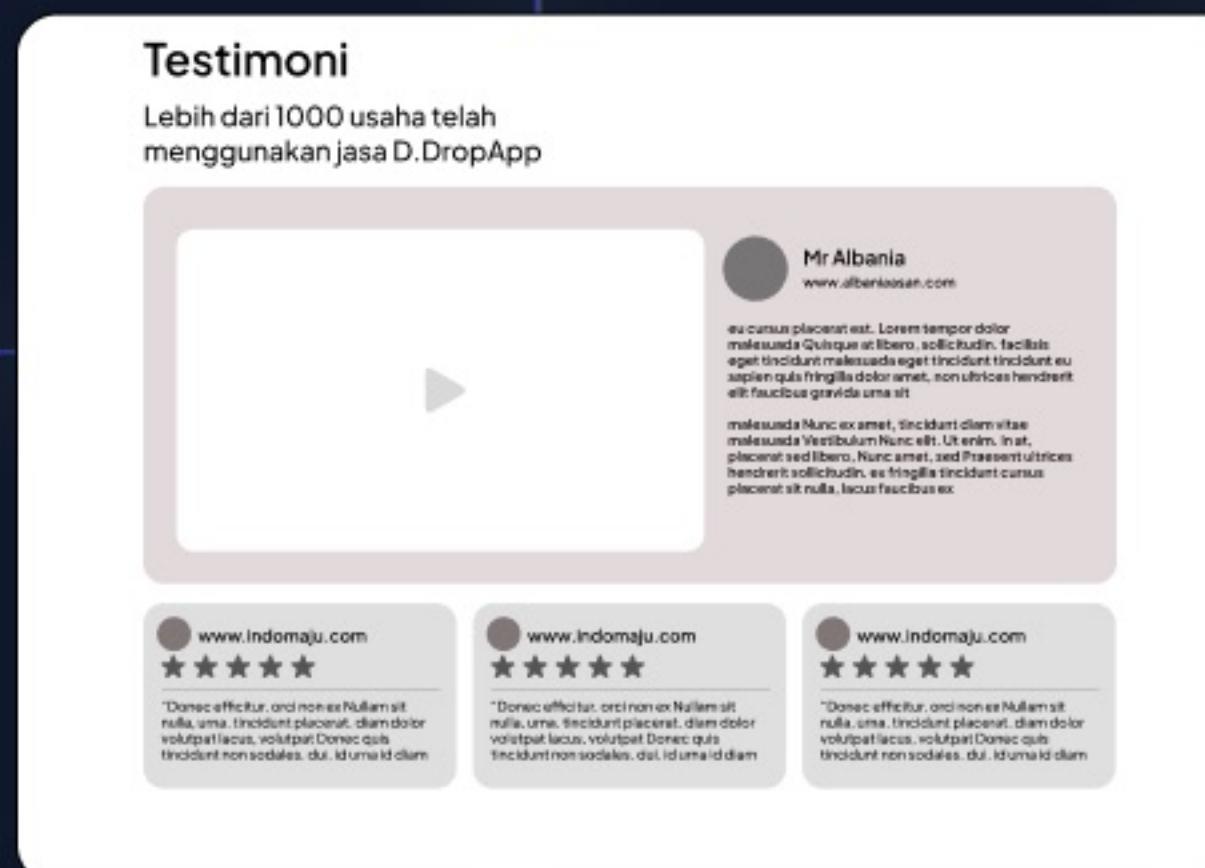

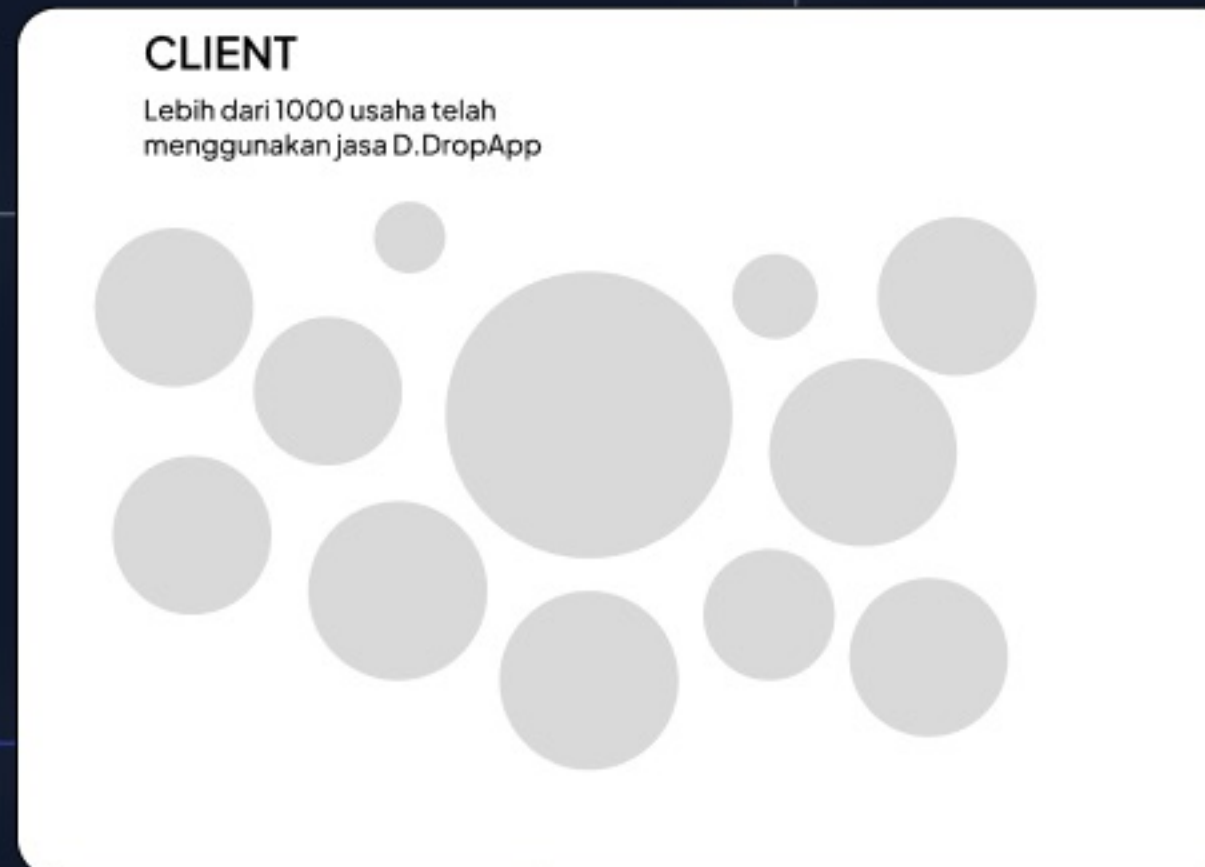

Feb 2025

Tools

When I design a website, the first step I take is to understand the company's needs and objectives. Once the required data is clear, I create a rough sketch on paper as a low-fidelity design.

Then, I create a mid-fidelity version in Figma with a basic black-and-white content layout. Before that, I search for references of similar websites, designs, layouts, or objectives, and then I create a moodboard to give a visual idea.

In this design, I used the glassmorphism effect to create an exclusive look that matches the company's branding. This effect gives the website an elegant and high-quality feel. The choice of black as the main color also helps convey exclusivity, simplicity, and dynamism.

D.DropApp

ServicesBenefitsReviewsClientsRegisterBook Demo

High-Quality Webshop Creation Services for Your Business.

Professional Webshop Services: Custom Designs, Seamless Payment Integration, and Easy Product Management for Your Business.

RegisterBook Demo

We provide tailored features to meet every client's needs

Complete webshop services. Build your store and grow your business

Design Webshop Custom

Request a fully custom-designed webshop, tailored to reflect your unique brand and meet the specific needs of your business.

Secure Payment Integration

Integrate secure payment options easily and boost customer trust. With a seamless, safe payment process, you can offer your customers peace of mind.

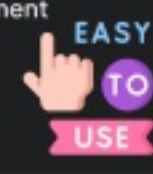

Reports & Analytics

Track performance with insightful reports and analytics.

Easy Product Management

Easily manage your products with an intuitive and simple system.

Cloud Storage with Automatic Backup

Secure your data with cloud storage and automatic backups.

Automatic SEO Optimization

Boost your visibility with automatic SEO optimization.

Responsive Designs, Optimized for All Devices

Ensure a smooth and consistent user experience with responsive designs that adapt seamlessly to any device, from desktop to mobile.

The Benefits of Partnering with Us

Maximize your business potential with our tailored solutions, seamless integrations, and expert support.

Competitive Pricing

Get the best value for your business with our competitive pricing, offering top-quality services without breaking your budget.

24/7 Support

Enjoy peace of mind with our 24/7 support, always ready to assist you whenever you need help. Whether you have a quick question or require detailed assistance, our dedicated team is just a click away, ensuring that your business.

Custom Design

Create a unique and personalized webshop with our custom design services, tailored to fit your brand's identity.

Automatic Maintenance

Ensure your webshop runs smoothly with automatic maintenance, keeping everything up to date without any hassle.

Free Hosting

Enjoy reliable performance with our free hosting service, providing you with everything you need to get started online.

User-Friendly

Experience a hassle-free setup with our user-friendly platform, designed for ease and efficiency. Build, manage, and grow your webshop effortlessly, even without technical skills.

Chordlify

Chordlify, an app that helps casual guitarist to play the song they want by suggesting simpler chords that still sound similar to the actual song using substitute chords.

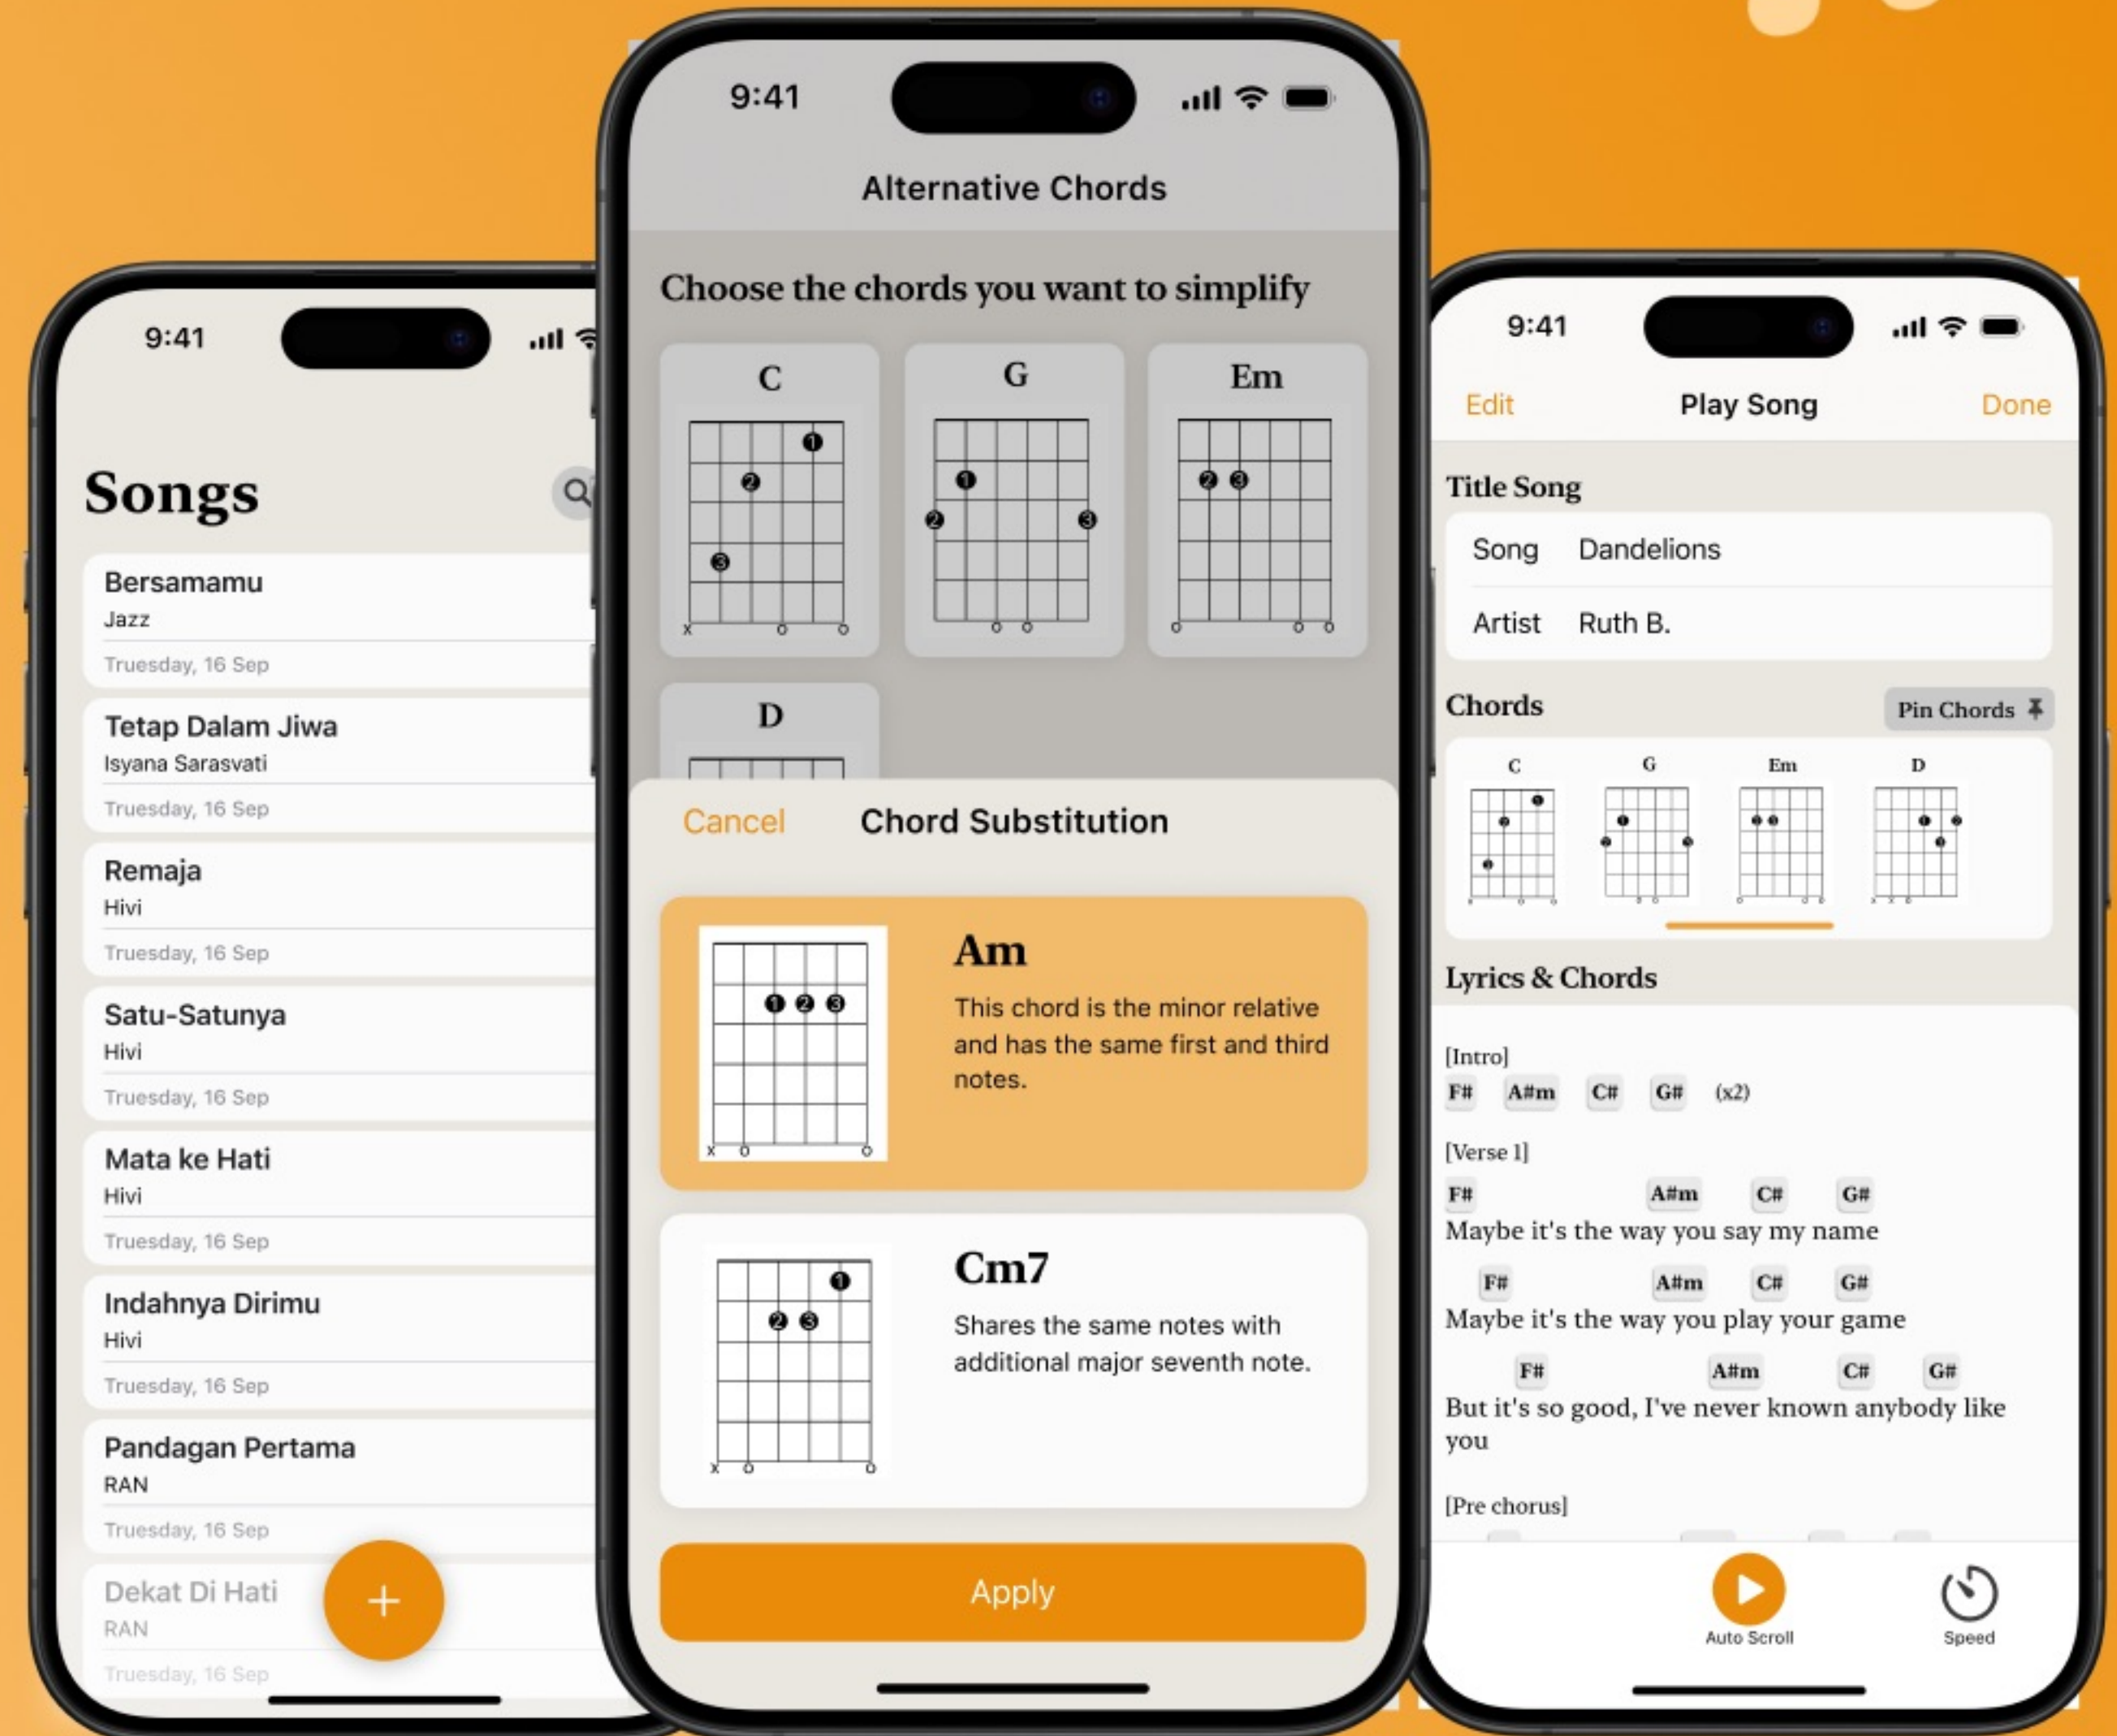

Role

UI/UX Designer & Researcher

Project Duration

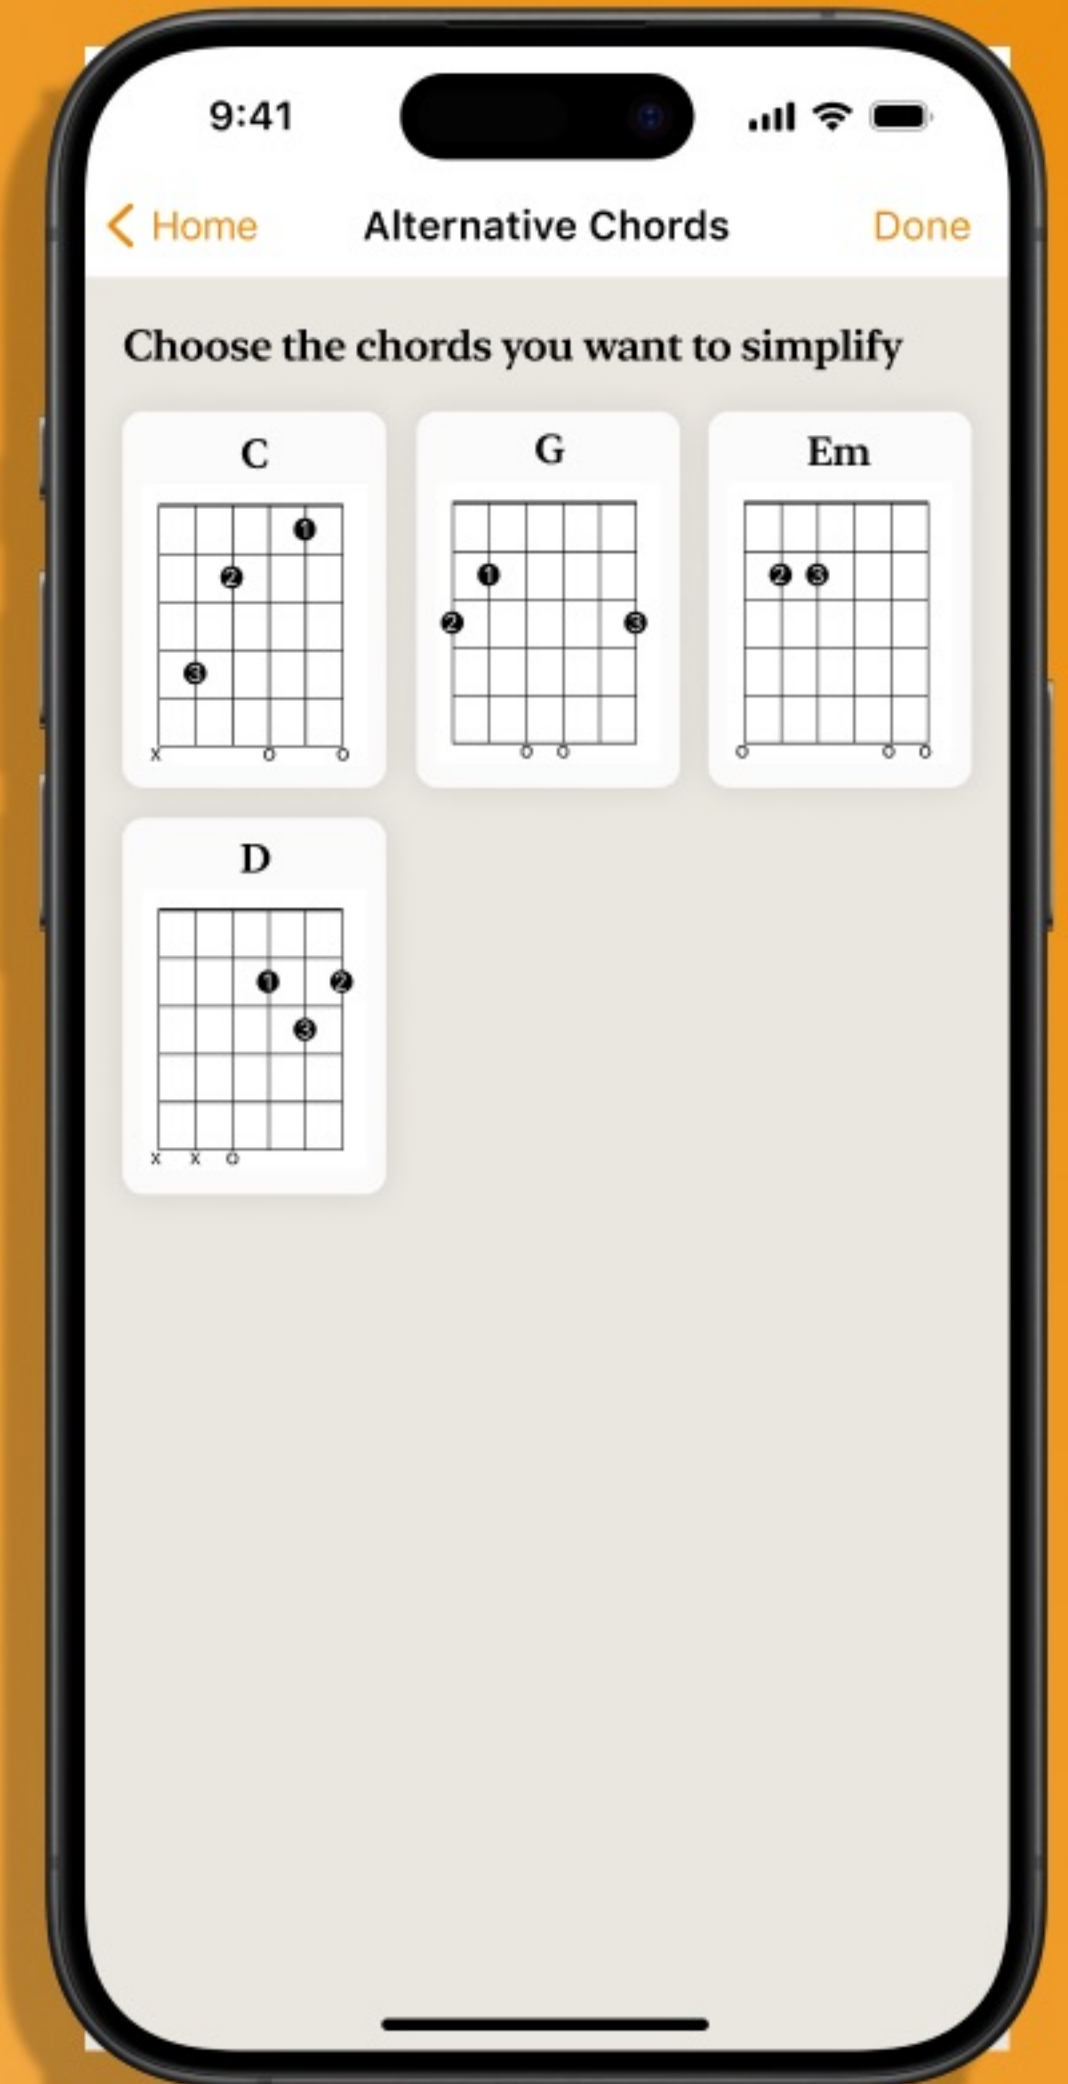

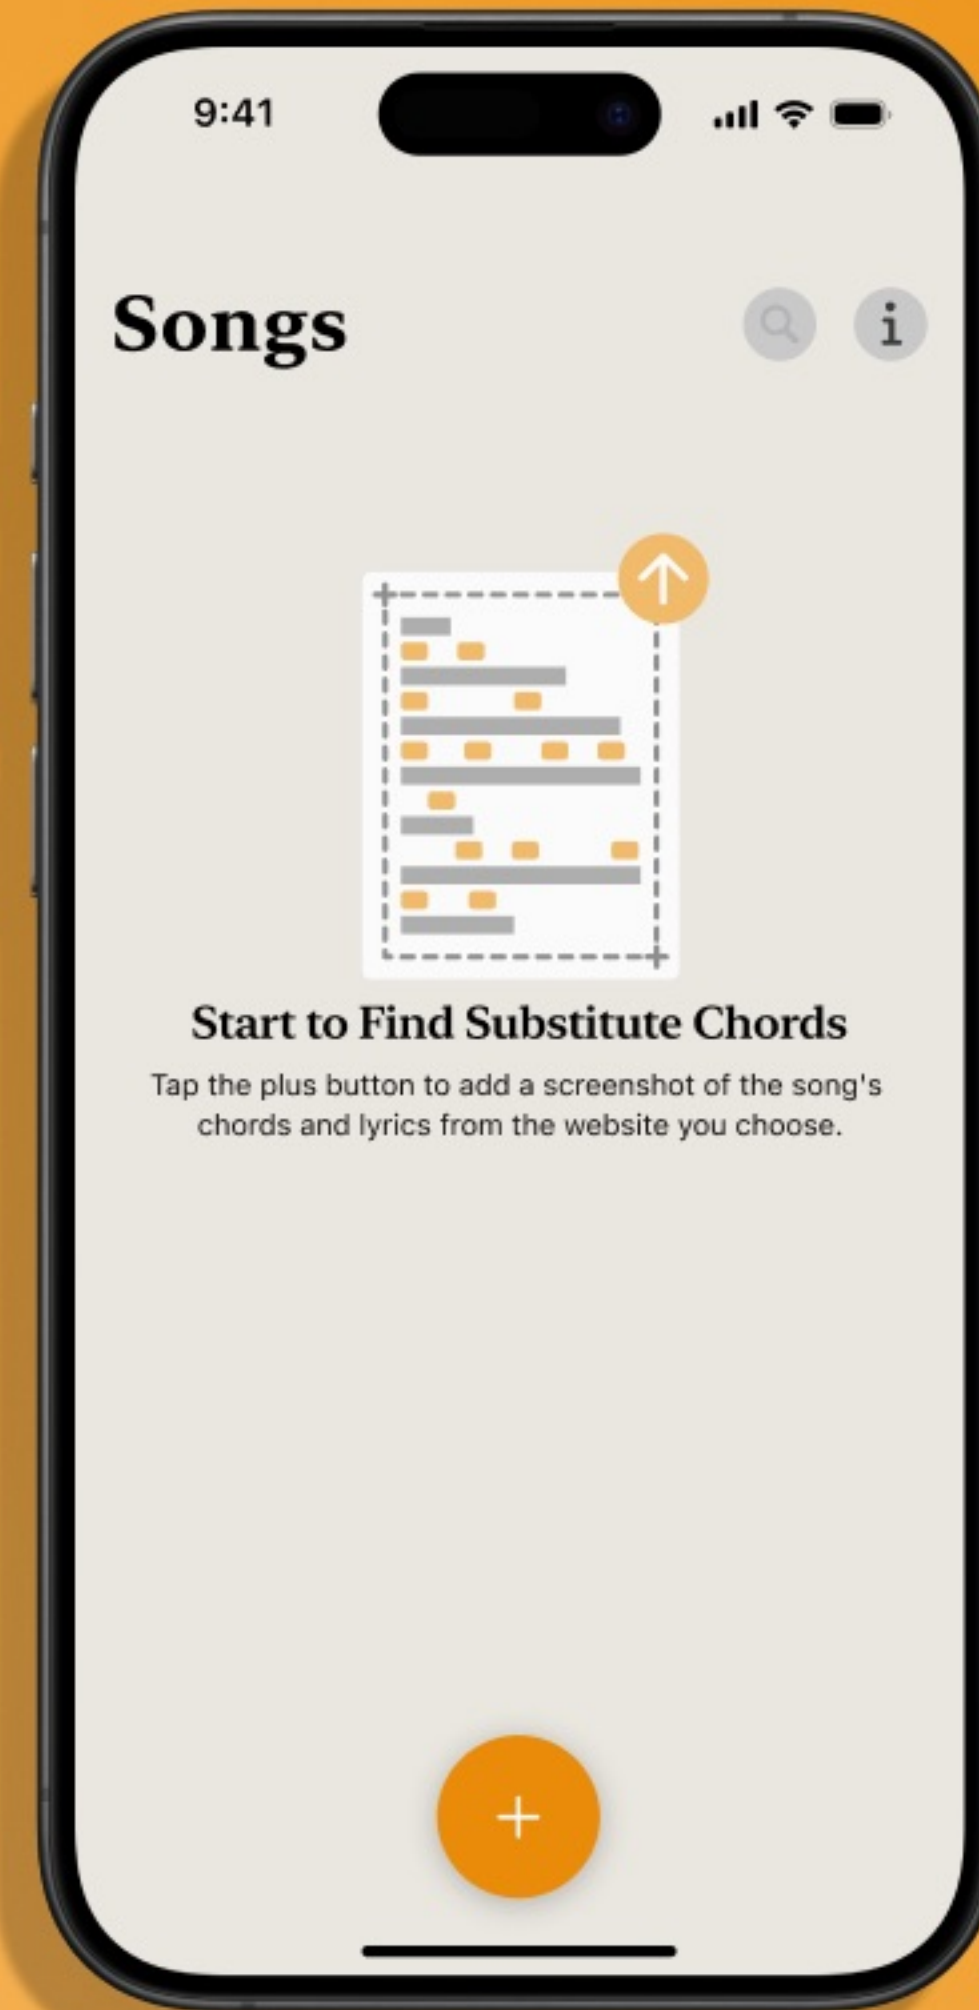

Aug - Sep 2024

Tools

As a UX researcher, I studied the habits of beginner guitar players and found their pain point in the difficulty of playing complex chords, so my team and I were interested in researching this topic.

Applied design thinking to understand user problems, deliver structured solutions, and collaborate effectively with the team through creative thinking.

Developed mood board, high-fidelity iterations, and comprehensive documentation, integrating creative thinking to ensure functional and visually appealing designs.

Conducted usability testing with prospective users, leveraging active listening to gain valuable insights and achieving 100% task completion accuracy.

The Chordlify app is ready on the Appstore, my main role in this application is to ensure that users can use the application easily and correctly, I study user habits, differentiate user needs and user wants, and collaborate with fellow UI/UX designers in the team.

PinBI

PinBI, a macOS App designed to help 12th-grade high school students learn to write proper and correct Indonesian by checking the number of spelling and grammar errors in the input text using NLP technology.

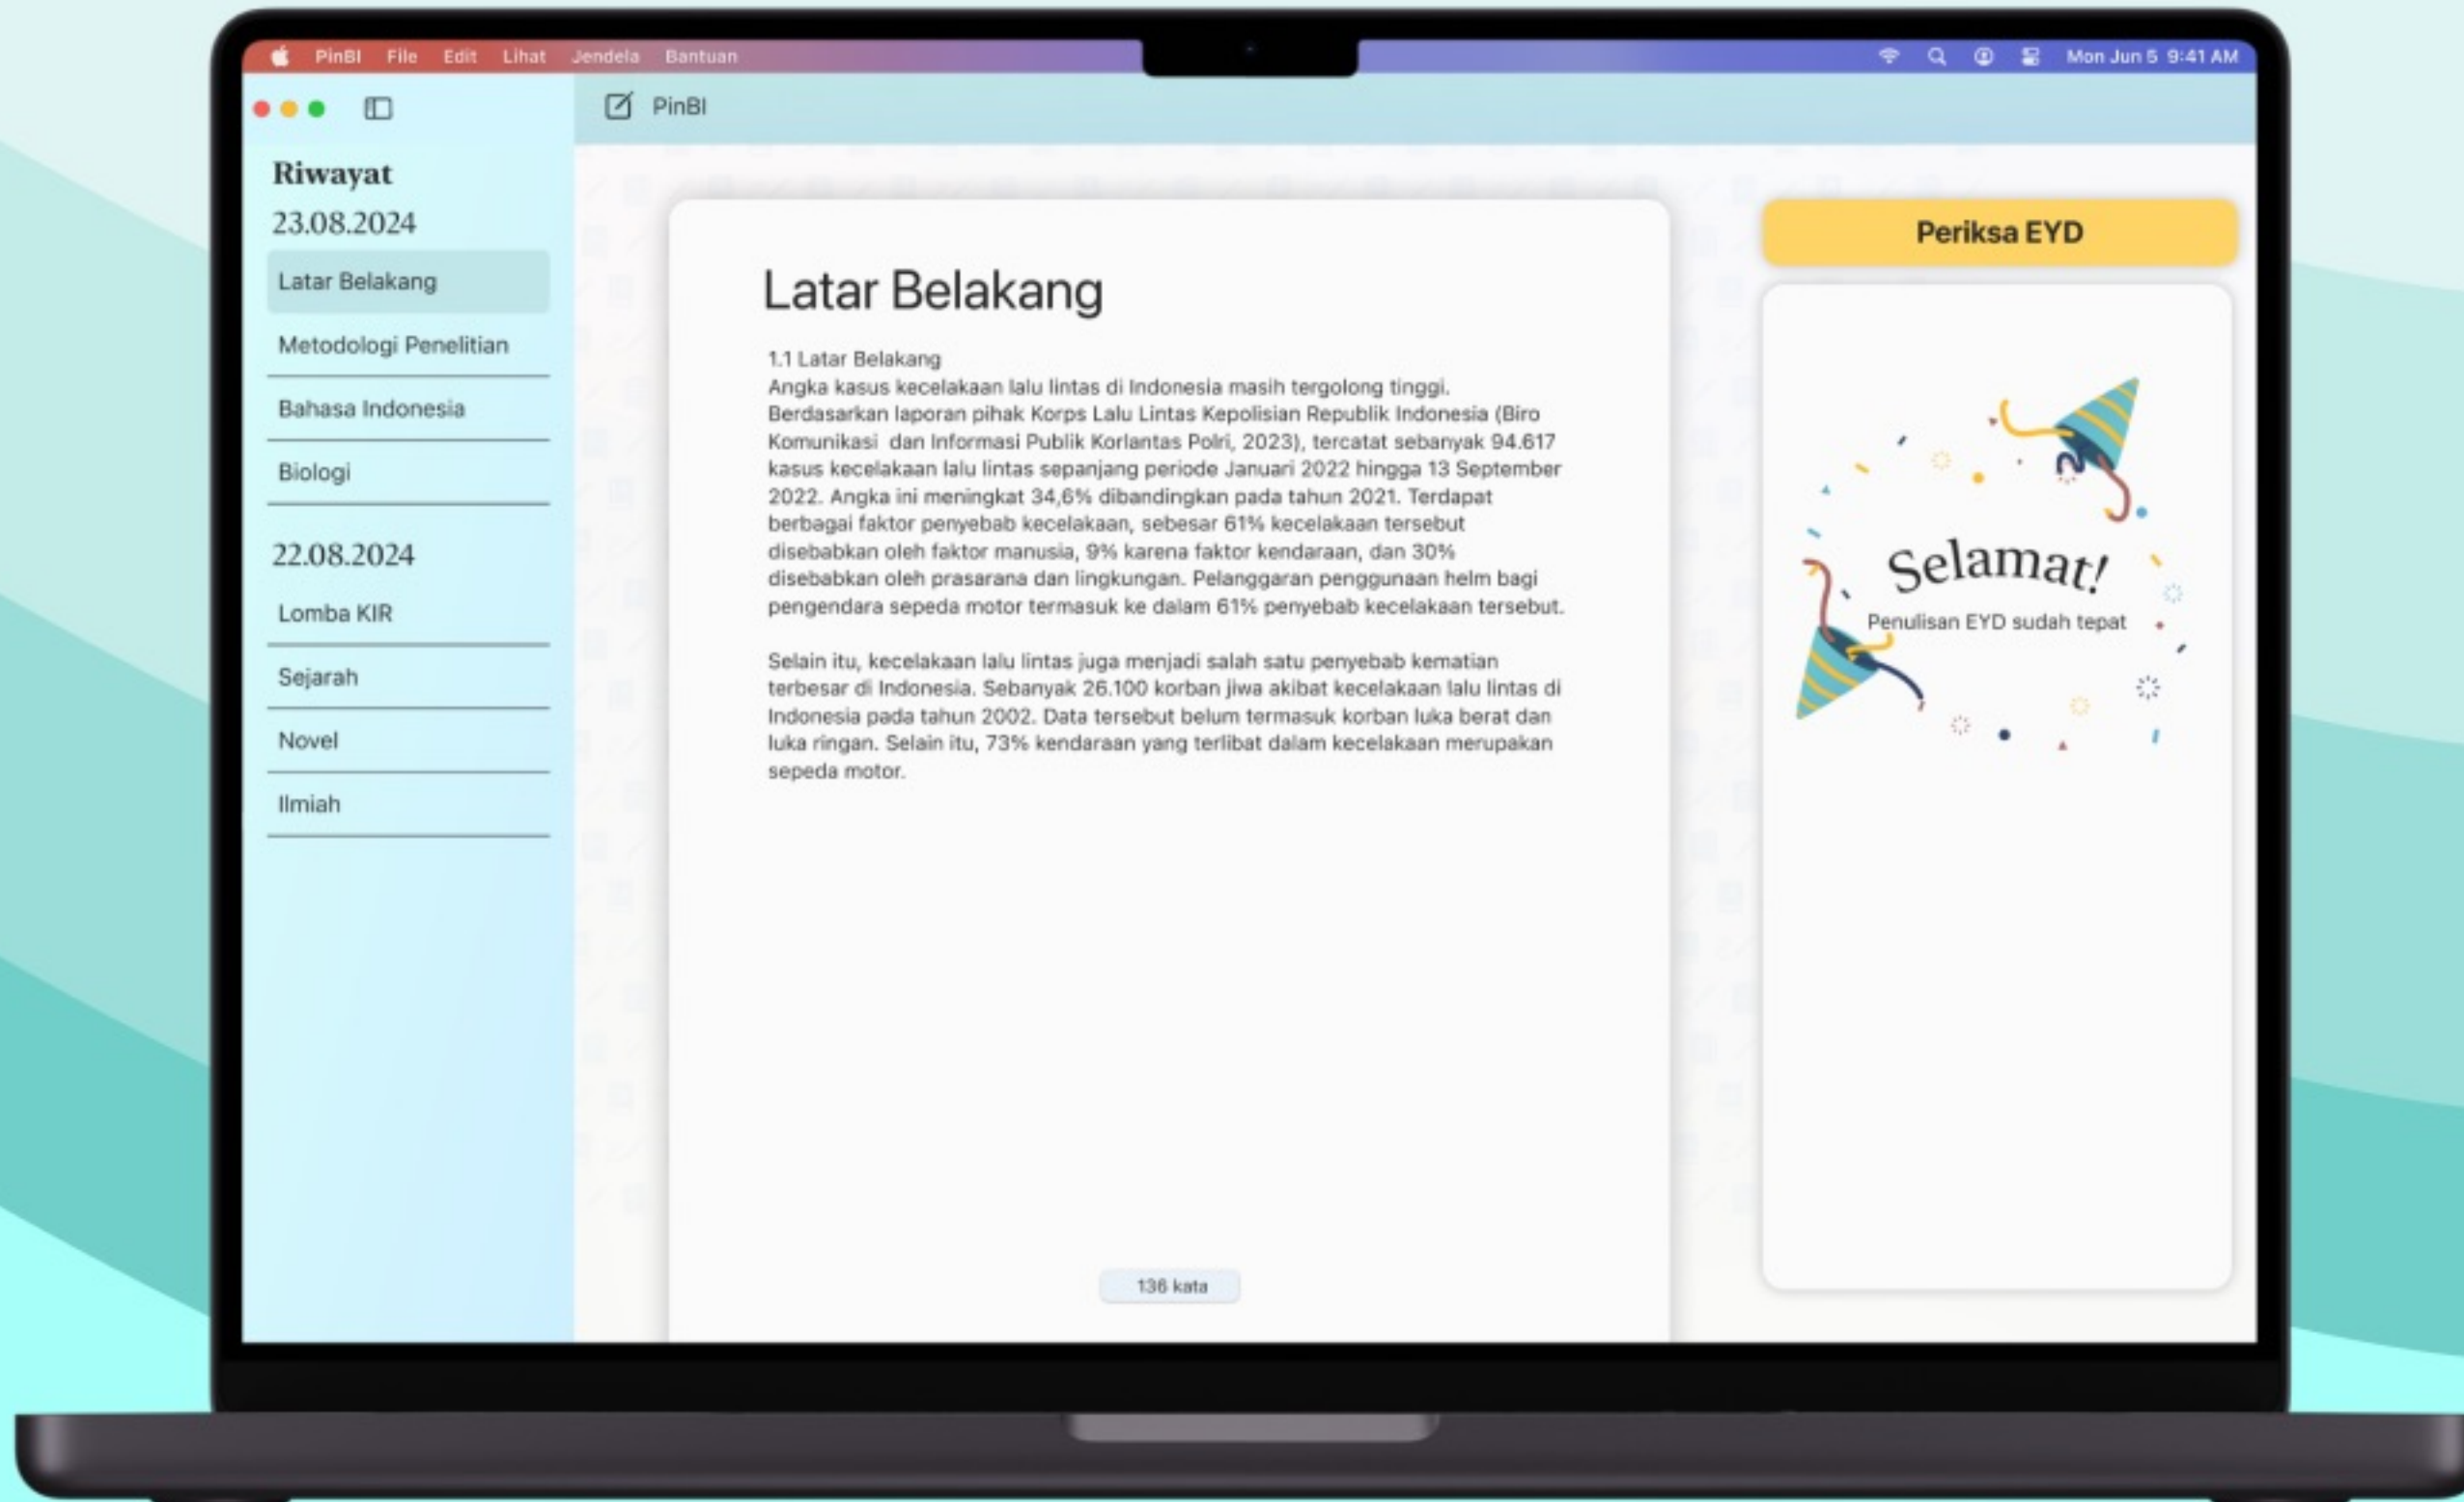

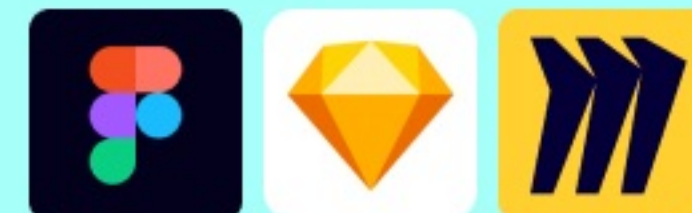

Role

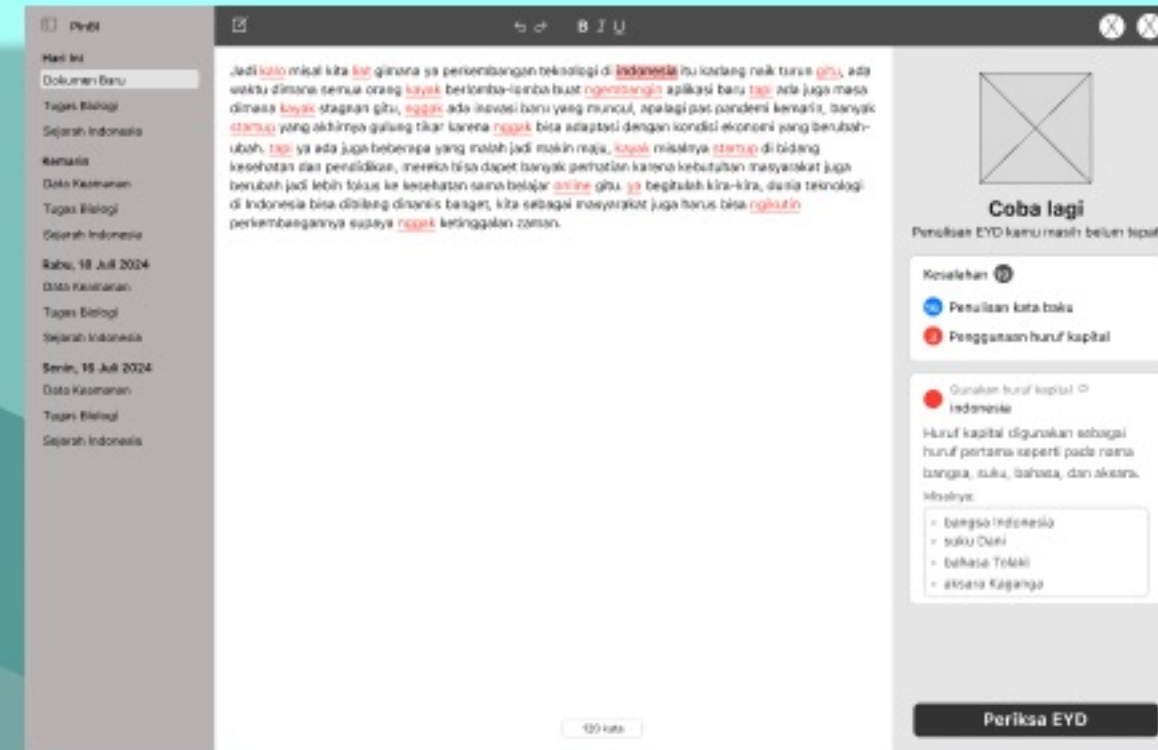

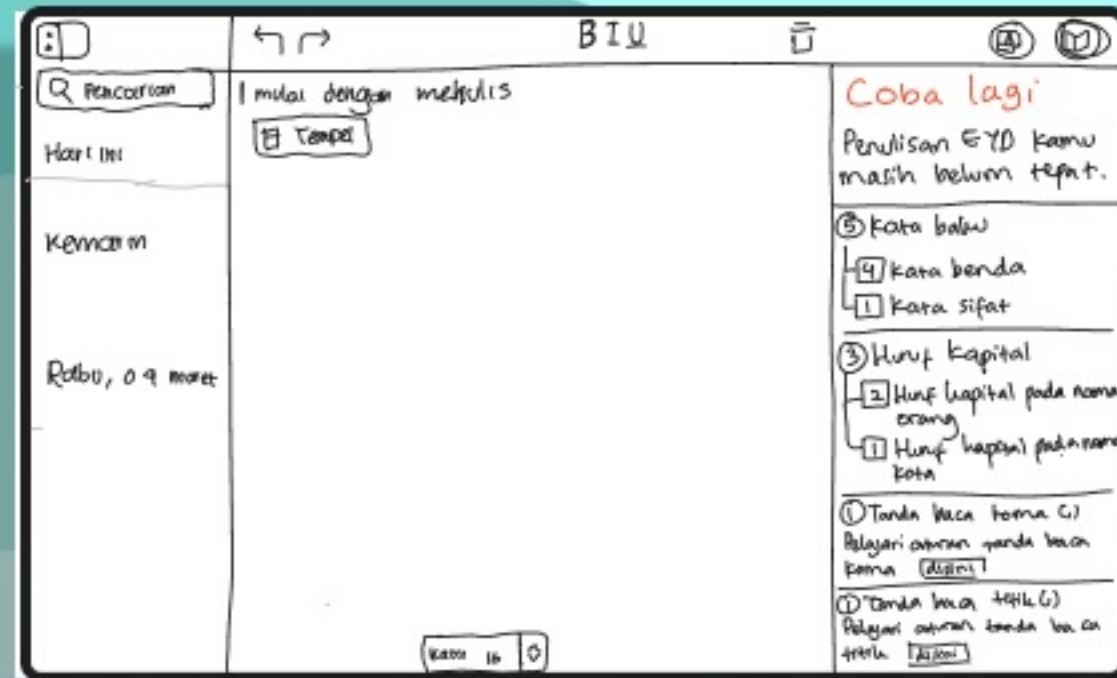

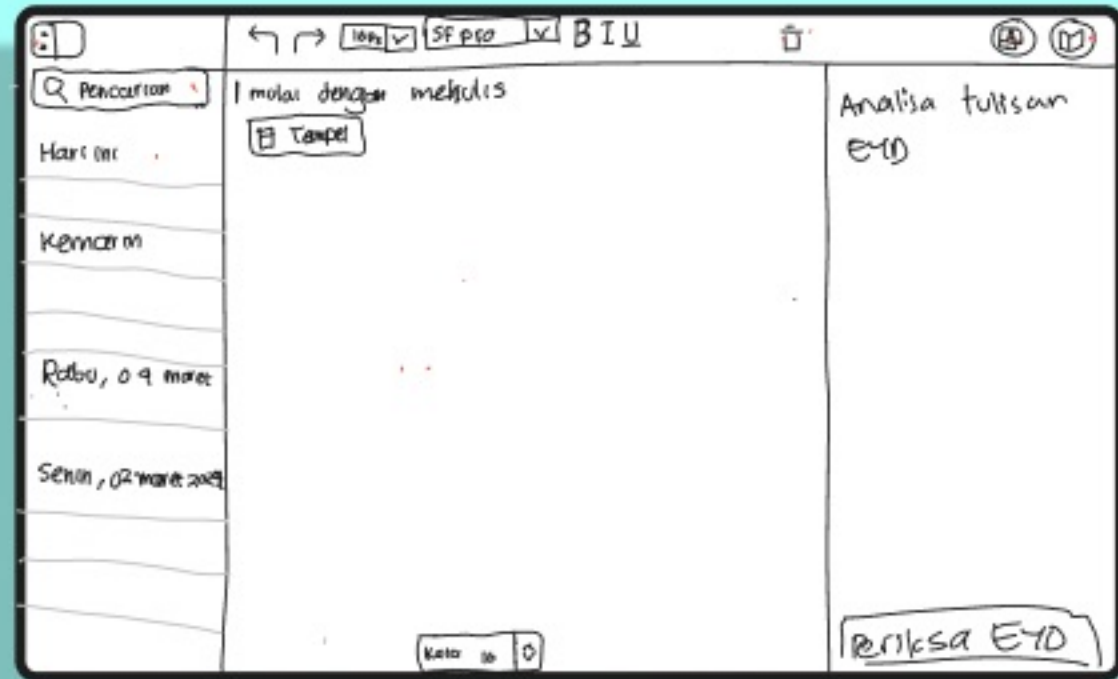

UX Designer & Researcher

Project Duration

Jul - Aug 2024

Tools

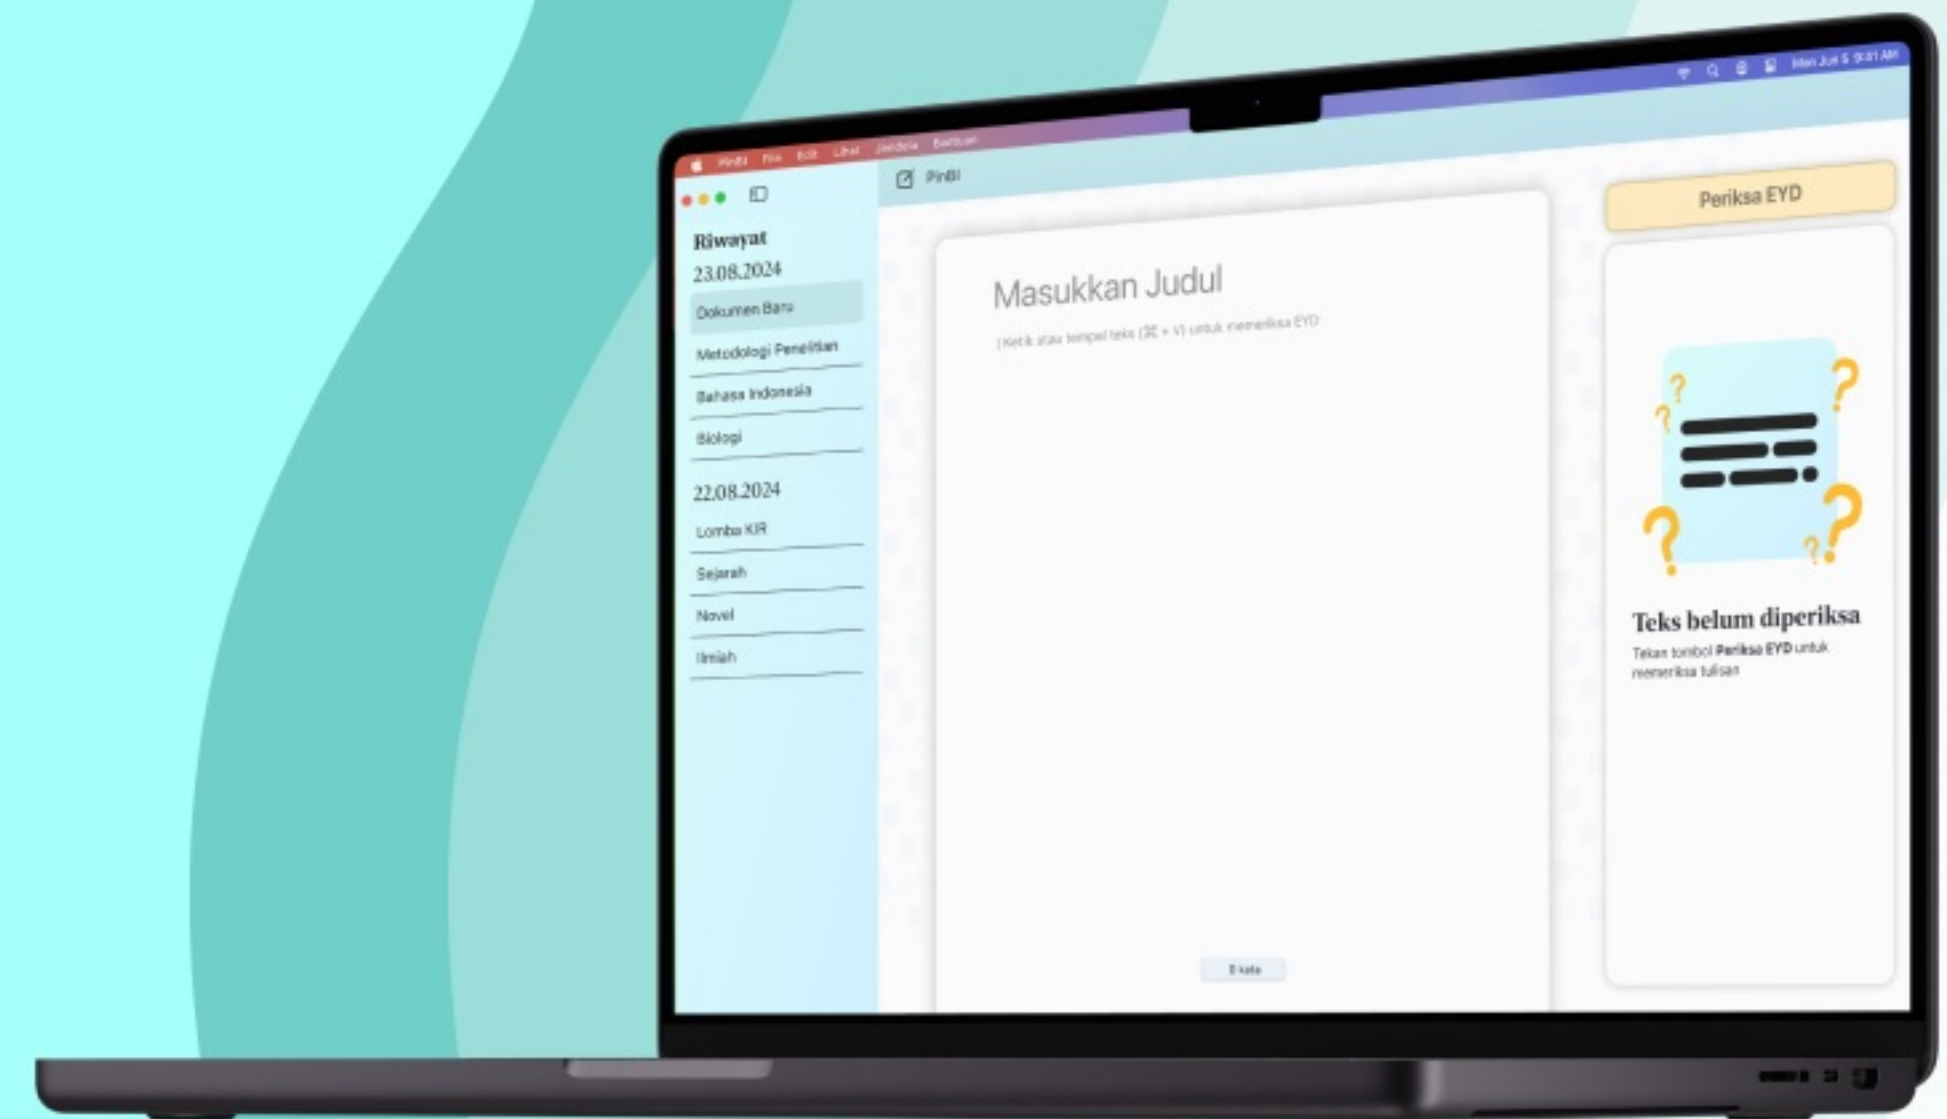

As a UX researcher, I was challenged to create a solution idea using NLP technology and targeting teen users. I tried to interview high school students and got an opportunity that could be developed to produce a solution.

Performed research and user interviews to identify pain points, user needs, and goals, utilizing analytic thinking to create effective solutions based on the insights gathered.

Conducted usability testing (UT) with prospective users, gathering valuable feedback and iterating designs to better understand and address user needs.

Collaborated with developers and designers, ensuring that the final product reflected a balance of user needs and aesthetic value.

Loona

Loona, this application was developed to build the habit of girls aged 12-14 years old to carry sanitary pads before and during menstruation using the cue, craving, response and reward method.

Role

UI/UX Designer & Researcher

Project Duration

Apr - Mei 2024

Tools

In my design process, I focus on developing effective mid-fidelity layouts by creating multiple design variations tailored to user needs. I then conduct usability testing with target users using interactive prototypes to identify the most suitable and user-centric design.

During testing, I analyze user interactions through methods like task analysis to evaluate the efficiency of the design, the success rate of users completing tasks, and gather direct feedback.

Based on the testing results, I select the best design to further develop into high-fidelity, ensuring the final solution is not only visually appealing but also functional and optimized for an excellent user experience.
